Welcome to The Praxis™ Study Companion

Prepare to Show What You Know

You have gained the knowledge and skills you need for your teaching career. Now you are ready to demonstrate your abilities by taking a Praxis™ test.

Using The Praxis Study Companion is a smart way to prepare for the test so you can do your best on test day. This guide can help keep you on track and make the most efficient use of your study time.

The Study Companion contains practical information and helpful tools, including:

- An overview of the tests
- Specific information on the Praxis test you are taking
- A template study plan
- Practice questions and explanations of correct answers
- Test-taking tips and strategies
- Frequently asked questions
- Links to more detailed information

So where should you start? Begin by reviewing this guide in its entirety and note those sections that you need to revisit. Then you can create your own personalized study plan and schedule based on your individual needs and how much time you have before test day.

Keep in mind that study habits are individual. There are many different ways to successfully prepare for your test. Some people study better on their own, while others prefer a group dynamic. You may have more energy early in the day, but another test taker may concentrate better in the evening. So use this guide to develop the approach that works best for you.

Your teaching career begins with preparation. Good luck!

    *Get ready for test day so you will be calm and confident*

**Appendix: Other Questions You May Have** ..................................... 32
1. Know What to Expect

*Familiarize yourself with the Praxis tests so you know what to expect*

**Which test should I take?**
Each state or agency that uses the Praxis tests sets its own requirements for which test or tests you must take for the teaching area you wish to pursue.

Before you register for a test, confirm your state or agency’s testing requirements at [www.ets.org/praxis/states](http://www.ets.org/praxis/states).

**How are the Praxis tests given?**
*Praxis I*® and *Praxis II*® tests are given in both computer and paper formats. **Note:** Not all *Praxis II* tests are offered in both formats.

**Should I take the computer- or paper-delivered test?**
You should take the test in whichever format you are most comfortable. Some test takers prefer taking a paper-and-pencil test, while others are more comfortable on a computer. Please note that not all tests are available in both formats.

**If I’m taking more than one Praxis test, do I have to take them all in the same format?**
No. You can take each test in the format in which you are most comfortable.

**Is there a difference between the subject matter covered on the computer-delivered test and the paper-delivered test?**
No. The computer-delivered test and paper-delivered test cover the same content.

**Where and when are the Praxis tests offered?**
You can select the test center that is most convenient for you. The Praxis tests are administered through an international network of test centers, which includes some universities, high schools, Prometric® Testing Centers, and other locations throughout the world.

Testing schedules depend on whether you are taking computer-delivered tests or paper-delivered tests. See the Praxis Web site for more detailed test registration information at [www.ets.org/praxis/register](http://www.ets.org/praxis/register).
2. Familiarize Yourself with Test Questions

*Become comfortable with the types of questions you’ll find on the Praxis tests*

The Praxis tests include two types of questions — multiple-choice (for which you select your answers from a list of choices) and constructed-response (for which you write a response of your own). You may be familiar with these question formats from taking other standardized tests. If not, familiarize yourself with them so you don't spend time during the test figuring out how to answer them.

**Understanding Multiple-Choice Questions**

Many multiple-choice questions begin with the phrase “which of the following.” Take a look at this example:

> Which of the following is a flavor made from beans?
> (A) Strawberry
> (B) Cherry
> (C) Vanilla
> (D) Mint

**How would you answer this question?**

All of the answer choices are flavors. Your job is to decide which of the flavors is the one made from beans.

Try following these steps to select the correct answer.

1) **Limit your answer to one of the choices given.** You may know that chocolate and coffee are also flavors made from beans, but they are not listed. Rather than thinking of other possible answers, focus only on the choices given (“which of the following”).

2) **Eliminate incorrect answers.** You may know that strawberry and cherry flavors are made from fruit and that mint flavor is made from a plant. That leaves vanilla as the only possible answer.

3) **Verify your answer.** You can substitute “vanilla” for the phrase “which of the following” and turn the question into this statement: “Vanilla is a flavor made from beans.” This will help you be sure that your answer is correct. If you're still uncertain, try substituting the other choices to see if they make sense. You may want to use this technique as you answer multiple-choice questions on the practice tests.
Try a more challenging example

The vanilla bean question is pretty straightforward, but you'll find that more challenging questions have a similar structure. For example:

**Entries in outlines are generally arranged according to which of the following relationships of ideas?**

(A) Literal and inferential
(B) Concrete and abstract
(C) Linear and recursive
(D) Main and subordinate

You'll notice that this example also contains the phrase “which of the following.” This phrase helps you determine that your answer will be a “relationship of ideas” from the choices provided. You are supposed to find the choice that describes how entries, or ideas, in outlines are related.

Sometimes it helps to put the question in your own words. Here, you could paraphrase the question in this way: “How are outlines usually organized?” Since the ideas in outlines usually appear as main ideas and subordinate ideas, the answer is (D).

**QUICK TIP:** Don't be intimidated by words you may not understand. It might be easy to be thrown by words like “recursive” or “inferential.” Read carefully to understand the question and look for an answer that fits. An outline is something you are probably familiar with and expect to teach to your students. So slow down, and use what you know.

Watch out for multiple-choice questions containing “NOT,” “LEAST,” and “EXCEPT”

This type of question asks you to select the choice that does not fit. You must be very careful because it is easy to forget that you are selecting the negative. This question type is used in situations in which there are several good solutions or ways to approach something, but also a clearly wrong way.

How to approach questions about graphs, tables, or reading passages

When answering questions about graphs, tables, or reading passages, provide only the information that the questions ask for. In the case of a map or graph, you might want to read the questions first, and then look at the map or graph. In the case of a long reading passage, you might want to go ahead and read the passage first, marking places you think are important, and then answer the questions. Again, the important thing is to be sure you answer the questions as they refer to the material presented. So read the questions carefully.

How to approach unfamiliar formats

New multiple-choice formats are developed from time to time to find new ways of assessing knowledge. If you see a format you are not familiar with, read the directions carefully. Then read and approach the question the way you would any other question, asking yourself what you are supposed to be looking for and what details are given in the question that will help you find the answer.

Here is an example of a format you might not have encountered before:

**Directions:** The following question asks you to analyze teacher goals and actions intended to lead to the achievement of the goal. Decide whether the action is likely or unlikely to lead to the achievement of the goal.
**GOAL:** To increase the participation of low-achieving middle school students in whole-class discussions.

**ACTION:** Instead of asking for volunteers, the teacher randomly calls on students to discuss homework assignments.

(A) Likely, because students who feel anxiety about being called on will be more at ease and will pay more attention to class discussions

(B) Likely, because low-achieving students often hesitate to volunteer and random questioning will increase responses from those students

(C) Unlikely, because students in the middle school grades prefer to have a choice in responding to discussions

(D) Unlikely, because students’ positive feelings toward the teacher will decrease

To answer this question correctly you must read the directions, which explain how the paragraph marked “GOAL,” the paragraph marked “ACTION,” and the answer choices fit together. The answer is (B) because it is the only action that is both “likely” to be successful and “likely” to be the right reason. To answer this question, first decide whether the action was likely to achieve the desired goal. Then select the reason. This two-part selection process brings you to your answer.

**QUICK TIP:** Don’t make the questions more difficult than they are. Don’t read for hidden meanings or tricks. There are no trick questions on Praxis tests. They are intended to be serious, straightforward tests of your knowledge.

### Understanding Constructed-Response Questions

Constructed-response questions require you to demonstrate your knowledge in a subject area by providing in-depth explanations on particular topics. Essay and problem solving are types of constructed-response questions.

For example, an essay question might present you with a topic and ask you to discuss the extent to which you agree or disagree with the opinion stated. You must support your position with specific reasons and examples from your own experience, observations, or reading.

Take a look at a few sample essay topics:

- “Celebrities have a tremendous influence on the young, and for that reason, they have a responsibility to act as role models.”
- “We are constantly bombarded by advertisements—on television and radio, in newspapers and magazines, on highway signs, and the sides of buses. They have become too pervasive. It’s time to put limits on advertising.”
- “Advances in computer technology have made the classroom unnecessary, since students and teachers are able to communicate with one another from computer terminals at home or at work.”

A problem-solving question might ask you to solve a mathematics problem such as the one below and show how you arrived at your solution:

a) In how many different ways can 700 be expressed as the product of two positive integers? Show how you arrived at your answer.

b) Among all pairs of positive integers whose product is 700, which pair has the maximum greatest common divisor? Explain how you arrived at your answer.
Keep these things in mind when you respond to a constructed-response question

1) **Answer the question accurately.** Analyze what each part of the question is asking you to do. If the question asks you to describe or discuss, you should provide more than just a list.

2) **Answer the question completely.** If a question asks you to do three distinct things in your response, you should cover all three things for the best score. Otherwise, no matter how well you write, you will not be awarded full credit.

3) **Answer the question that is asked.** Do not change the question or challenge the basis of the question. You will receive no credit or a low score if you answer another question or if you state, for example, that there is no possible answer.

4) **Give a thorough and detailed response.** You must demonstrate that you have a thorough understanding of the subject matter. However, your response should be straightforward and not filled with unnecessary information.

5) **Reread your response.** Check that you have written what you thought you wrote. Be sure not to leave sentences unfinished or omit clarifying information.

**QUICK TIP:** You may find that it helps to circle each of the details of the question in your test book or take notes on scratch paper so that you don’t miss any of them. Then you’ll be sure to have all the information you need to answer the question.

For tests that have constructed-response questions, more detailed information can be found in “4. Learn About Your Test” on page 11.
3. Understand Your Scores

*Understand how tests are scored and how to interpret your test scores*

Of course, passing the *Praxis* test is important to you so you need to understand what your scores mean and what your state requirements are.

**What are the score requirements for my state?**

States, institutions, and associations that require the tests set their own passing scores. Visit [www.ets.org/praxis/states](http://www.ets.org/praxis/states) for the most up-to-date information.

**If I move to another state, will my new state accept my scores?**

*The Praxis Series* tests are part of a national testing program, meaning that they are required in more than one state for licensure. The advantage of a national program is that if you move to another state that also requires *Praxis* tests, you can transfer your scores. Each state has specific test requirements and passing scores, which you can find at [www.ets.org/praxis/states](http://www.ets.org/praxis/states).

**How do I know whether I passed the test?**

Your score report will include information on passing scores for the states you identified as recipients of your test results. If you test in a state with automatic score reporting, you will receive passing score information for that state.

A list of states and their passing scores for each test are available online at [www.ets.org/praxis/states](http://www.ets.org/praxis/states).

**What your *Praxis* scores mean**

You received your score report. Now what does it mean? It’s important to interpret your score report correctly and to know what to do if you have questions about your scores.

**Put your scores in perspective**

Your score report indicates:

- Your score and whether you passed
- The range of possible scores
- The raw points available in each content category
- The range of the middle 50 percent of scores on the test
- Your Recognition of Excellence (ROE) Award status, if applicable (found at [www.ets.org/praxis/scores/understand/roe](http://www.ets.org/praxis/scores/understand/roe))

If you have taken the same test or other tests in *The Praxis Series* over the last 10 years, your score report also lists the highest score you earned on each test taken.
Content category scores and score interpretation

On many of the Praxis tests, questions are grouped into content categories. To help you in future study or in preparing to retake the test, your score report shows how many “raw points” you earned in each content category. Compare your “raw points earned” with the maximum points you could have earned (“raw points available”). The greater the difference, the greater the opportunity to improve your score by further study.

Score scale changes

ETS updates Praxis tests on a regular basis to ensure they accurately measure the knowledge and skills that are required for licensure. Updated tests cover the same content as the previous tests. However, scores might be reported on a different scale, so requirements may vary between the new and previous versions. All scores for previous, discontinued tests are valid and reportable for 10 years.

These resources may also help you interpret your scores:

- *Understanding Your Praxis Scores* (PDF), found at [www.ets.org/praxis/scores/understand](http://www.ets.org/praxis/scores/understand)
- *The Praxis Series Passing Scores* (PDF), found at [www.ets.org/praxis/scores/understand](http://www.ets.org/praxis/scores/understand)
- State requirements, found at [www.ets.org/praxis/states](http://www.ets.org/praxis/states)

| VI. Health Education Pedagogy       | 12 | 10% |

**About This Test**

The Health Education test is designed to measure the professional knowledge of prospective teachers of health education in elementary schools, junior high schools, and senior high schools.

The questions invite examinees to recall basic knowledge and to apply education and health principles to real-life situations. The content is appropriate for examinees who have completed a bachelor’s degree program in health education.

The 120 multiple-choice questions cover health education as a discipline, promoting healthy lifestyles, community health advocacy, healthy relationships, disease prevention, and health education pedagogy.

This test may contain some questions that will not count toward your score.
Topics Covered

Representative descriptions of topics covered in each category are provided below.

I. Health Education as a Discipline
   - Health literacy: critical thinking and problem solving, communication, responsible citizenship, and self-directed learning
   - Responsibilities and competencies for entry-level health educators
   - National health education standards
   - Morbidity, mortality, and behavioral risk data—leading causes of death (YRBSS, BRFSS, SHPPS)
   - CDC adolescent risk behaviors: unintentional/intentional injuries, HIV, STIs, unintended pregnancy, tobacco use, alcohol and other drugs, dietary patterns, and sedentary lifestyles
   - Major health behavior theories
   - Coordinated school health: health education, physical education, health services, nutrition services, health promotion for staff, counseling, psychological and social services, healthy school environment, and family/community involvement
   - Health/wellness domains
   - Science foundations related to health
   - Code of Ethics for the health education profession
   - Anatomy and physiology (body systems)

II. Promoting Healthy Lifestyles
   - Individual responsibility for healthy lifestyles: goal setting and decision making
   - Physical fitness and health-related fitness: body composition, cardiorespiratory endurance (cardiovascular fitness), flexibility, muscular strength and endurance, and individualizing exercise programs
   - Nutrition: basic food groups/dietary goals, nutrients, metabolism, calories and fat diets, and dietary patterns
   - Stress management: coping skills
   - Reducing and preventing health risks: unintentional/intentional injuries (personal safety, basic first-aid techniques); HIV; STIs; unintended pregnancy; tobacco use; alcohol and other drugs such as OTC drugs, prescription drugs, generic drugs, illegal substances, “non-drug drugs” (e.g., caffeine); causes for the use and abuse of substances; alternate coping skills; physical and psychological effects; treatment; and sedentary lifestyles

III. Community Health Advocacy
   - Health and safety laws and regulations: disease reporting, confidentiality, work/recreational safety, controlled substances, immunizations, tobacco use, disabilities
   - Environmental health issues
   - Consumer health issues (quackery, advertising, health care delivery systems, insurance, importance of regular checkups, personal responsibility for health care, health “myths”)
   - Access valid health information, products, and services
   - Health careers (types of occupational positions, career possibilities, educational requirements prior to training, formal training required [number of years, types of programs])
   - Health agencies (public/private, services provided, cost considerations, health care delivery systems)
   - Leadership
   - Community service

IV. Healthy Relationships
   - Decision-making skills
   - Growth and development: life stages and death and dying
   - Psychosocial development: family structure relationships, peer relationships, self-concept, self-esteem, and character education
   - Interpersonal communication: conflict resolution, assertiveness, refusal skills, “I” messages, and active listening
   - Dating, marriage/partnerships, and parenting: readiness and responsibility
   - Sexuality: reproductive choices, sexual expression, sexual difficulties, and pregnancy and infertility
   - Violence: abuse (physical, verbal, emotional, and sexual) and bullying and harassment
   - Diverse populations—meeting pluralistic society’s needs for health education relative to differing socioeconomic, cultural, and ethnic backgrounds
V. Disease Prevention

- Health conditions: acute and chronic, communicable and noncommunicable, infectious and noninfectious, genetic, congenital, environment-related, and myths and misconceptions
- Mental and emotional health: depression, suicide, addictive behaviors, eating disorders, classification of mental illness, and defense mechanisms
- Treatment and counseling
- Hygiene

VI. Health Education Pedagogy

- Assessing learning needs (individual and community)
- Planning instruction (performance-based objectives, curriculum, and programs)
- Implementing instruction (methods, strategies, and techniques)
- Evaluating student learning and teacher effectiveness
5. Determine Your Strategy for Success

Set clear goals and deadlines so your test preparation is focused and efficient

Effective Praxis test preparation doesn’t just happen. You’ll want to set clear goals and deadlines for yourself along the way. Otherwise, you may not feel ready and confident on test day.

1) Learn what the test covers.

You may have heard that there are several different versions of the same test. It’s true. You may take one version of the test and your friend may take a different version a few months later. Each test has different questions covering the same subject area, but both versions of the test measure the same skills and content knowledge.

You’ll find specific information on the test you’re taking in “4. Learn About Your Test” on page 11 section, which outlines the content categories that the test measures and what percentage of the test covers each topic.
Visit www.ets.org/praxis/testprep for information on other Praxis tests.

2) Assess how well you know the content.

Research shows that test takers tend to overestimate their preparedness—this is why some test takers assume they did well and then find out they did not pass.

The Praxis tests are demanding enough to require serious review of likely content, and the longer you’ve been away from the content, the more preparation you will most likely need. If it has been longer than a few months since you’ve studied your content area, make a concerted effort to prepare.

3) Collect study materials.

Gathering and organizing your materials for review are critical steps in preparing for the Praxis tests. Consider the following reference sources as you plan your study:

- Did you take a course in which the content area was covered? If yes, do you still have your books or your notes?
- Does your college library have a good introductory college-level textbook in this area?
- Does your local library have a high school-level textbook?

Study guides are available for purchase for many Praxis tests at www.ets.org/praxis/testprep. Each guide provides a combination of test preparation and practice, including sample questions and answers with explanations.

4) Plan and organize your time.

You can begin to plan and organize your time while you are still collecting materials. Allow yourself plenty of review time to avoid cramming new material at the end. Here are a few tips:

- Choose a test date far enough in the future to leave you plenty of preparation time at www.ets.org/praxis/register/centers_dates.
- Work backward from that date to figure out how much time you will need for review.
- Set a realistic schedule—and stick to it.
5) Practice explaining the key concepts.

_Praxis_ tests with constructed-response questions assess your ability to explain material effectively. As a teacher, you’ll need to be able to explain concepts and processes to students in a clear, understandable way. What are the major concepts you will be required to teach? Can you explain them in your own words accurately, completely, and clearly? Practice explaining these concepts to test your ability to effectively explain what you know.

6) Understand how questions will be scored.

Scoring information can be found in “3. Understand Your Scores” on page 9.

7) Develop a study plan.

A study plan provides a road map to prepare for the _Praxis_ tests. It can help you understand what skills and knowledge are covered on the test and where to focus your attention. Use the study plan template on page 19 to organize your efforts.

And most important—get started!

Would a Study Group Work for You?

Using this guide as part of a study group

People who have a lot of studying to do sometimes find it helpful to form a study group with others who are working toward the same goal. Study groups give members opportunities to ask questions and get detailed answers. In a group, some members usually have a better understanding of certain topics, while others in the group may be better at other topics. As members take turns explaining concepts to one another, everyone builds self-confidence.

If the group encounters a question that none of the members can answer well, the group can go to a teacher or other expert and get answers efficiently. Because study groups schedule regular meetings, members study in a more disciplined fashion. They also gain emotional support. The group should be large enough so that multiple people can contribute different kinds of knowledge, but small enough so that it stays focused. Often, three to six members is a good size.

Here are some ways to use this guide as part of a study group:

- **Plan the group’s study program.** Parts of the study plan template, beginning on page 17 can help to structure your group’s study program. By filling out the first five columns and sharing the worksheets, everyone will learn more about your group’s mix of abilities and about the resources, such as textbooks, that members can share with the group. In the sixth column (“Dates I will study the content”), you can create an overall schedule for your group’s study program.

- **Plan individual group sessions.** At the end of each session, the group should decide what specific topics will be covered at the next meeting and who will present each topic. Use the topic headings and subheadings in the Test at a Glance table on page 12 to select topics, and then select practice questions, beginning on page 23.

- **Prepare your presentation for the group.** When it’s your turn present, prepare something that is more than a lecture. Write two or three original questions to pose to the group. Practicing writing actual questions can help you better understand the topics covered on the test as well as the types of questions you will
• Take the practice test together. The idea of the practice test is to simulate an actual administration of the test, so scheduling a test session with the group will add to the realism and may also help boost everyone’s confidence. Remember, complete the practice test using only the time that will be allotted for that test on your administration day.

• Learn from the results of the practice test. Score one another’s answer sheets. For tests that contain constructed-response questions, look at the Sample Test Questions section, which also contain sample responses to those questions and shows how they were scored. Then try to follow the same guidelines that the test scorers use.

• Be as critical as you can. You’re not doing your study partner(s) any favors by letting them get away with an answer that does not cover all parts of the question adequately.

• Be specific. Write comments that are as detailed as the comments about the sample responses. Indicate where and how your study partner(s) are doing an inadequate job of answering the question. Writing notes in the margins of the answer sheet may also help.

• Be supportive. Include comments that point out what your study partner(s) got right.

Then plan one or more study sessions based on aspects of the questions on which group members performed poorly. For example, each group member might be responsible for rewriting one paragraph of a response in which someone else did an inadequate job.

Whether you decide to study alone or with a group, remember that the best way to prepare is to have an organized plan. The plan should set goals based on specific topics and skills that you need to learn, and it should commit you to a realistic set of deadlines for meeting those goals. Then you need to discipline yourself to stick with your plan and accomplish your goals on schedule.
6. Develop Your Study Plan

**Develop a personalized study plan and schedule**

Planning your study time is important because it will help ensure that you review all content areas covered on the test. Use the sample study plan below as a guide. It shows a plan for the Praxis I® Pre-Professional Skills Test: Reading test. Following that is a study plan template that you can fill out to create your own plan. Use the “Learn about Your Test” and “Topics Covered” information beginning on page 11 to help complete it.

Use this worksheet to:
1. Define Content Areas: List the most important content areas for your test as defined in the Topics Covered section.
2. Determine Strengths and Weaknesses: Identify your strengths and weaknesses in each content area.
3. Identify Resources: Identify the books, courses, and other resources you plan to use for each content area.
4. Study: Create and commit to a schedule that provides for regular study periods.

**Praxis Test Name:** Praxis I Pre-Professional Skills Test: Reading  
**Praxis Test Code(s):** 0710  
**Test Date:** 11/15/12

My Study Plan

Use this worksheet to:

1. Define Content Areas: List the most important content areas for your test as defined in the Learn about Your Test and Topics Covered sections.
2. Determine Strengths and Weaknesses: Identify your strengths and weaknesses in each content area.
3. Identify Resources: Identify the books, courses, and other resources you plan to use for each content area.
4. Study: Create and commit to a schedule that provides for regular study periods.

<table>

7. Review Smart Tips for Success

*Follow test-taking tips developed by experts*

Learn from the experts. Take advantage of the following answers to questions you may have and practical tips to help you navigate the *Praxis* test and make the best use of your time.

**Should I Guess?**

Yes. Your score is based on the number of questions you answer correctly, with no penalty or subtraction for an incorrect answer. When you don’t know the answer to a question, try to eliminate any obviously wrong answers and then guess at the correct one. Try to pace yourself so that you have enough time to carefully consider every question.

**Can I answer the questions in any order?**

Yes. You can go through the questions from beginning to end, as many test takers do, or you can create your own path. Perhaps you will want to answer questions in your strongest area of knowledge first and then move from your strengths to your weaker areas. On computer-delivered tests, you can use the “Skip” function to skip a question and come back to it later. There is no right or wrong way. Use the approach that works best for you.

**Are there trick questions on the test?**

No. There are no hidden meanings or trick wording. All of the questions on the test ask about subject matter knowledge in a straightforward manner.

**Are there answer patterns on the test?**

No. You might have heard this myth: the answers on multiple-choice tests follow patterns. Another myth is that there will never be more than two questions with the same lettered answer following each other. Neither myth is true. Select the answer you think is correct based on your knowledge of the subject.

**Can I write in the test booklet or, for a computer-delivered test, on the scratch paper I am given?**

Yes. You can work out problems right on the pages of the booklet or scratch paper, make notes to yourself, mark questions you want to review later or write anything at all. Your test booklet or scratch paper will be destroyed after you are finished with it, so use it in any way that is helpful to you. But make sure to mark your answers on the answer sheet or enter them on the computer.

**Smart Tips for Taking the Test**

1. **For a paper-delivered test, put your answers in the right bubbles.** It seems obvious, but be sure that you fill in the answer bubble that corresponds to the question you are answering. A significant number of test takers fill in a bubble without checking to see that the number matches the question they are answering.

2. **Skip the questions you find extremely difficult.** Rather than trying to answer these on your first pass through the test, leave them blank and mark them in your test booklet. Pay attention to the time as you answer the rest of the questions on the test, and try to finish with 10 or 15 minutes remaining so that you
can go back over the questions you left blank. Even if you don't know the answer the second time you read the questions, see if you can narrow down the possible answers, and then guess.

3. Keep track of the time. Bring a watch to the test, just in case the clock in the test room is difficult for you to see. Keep the watch as simple as possible—alarms and other functions may distract others or may violate test security. If the test center supervisor suspects there could be an issue with your watch, they will ask you to remove it, so simpler is better! You will probably have plenty of time to answer all of the questions, but if you find yourself becoming bogged down in one section, you might decide to move on and come back to that section later.

4. Read all of the possible answers before selecting one. Then reread the question to be sure the answer you have selected really answers the question. Remember, a question that contains a phrase such as “Which of the following does NOT …” is asking for the one answer that is NOT a correct statement or conclusion.

5. Check your answers. If you have extra time left over at the end of the test, look over each question and make sure that you have answered it as you intended. Many test takers make careless mistakes that they could have corrected if they had checked their answers.

6. Don’t worry about your score when you are taking the test. No one is expected to answer all of the questions correctly. Your score on this test is not analogous to your score on the GRE® or other similar-looking (but in fact very different) tests. It doesn’t matter on the Praxis tests whether you score very high or barely pass. If you meet the minimum passing scores for your state and you meet the state's other requirements for obtaining a teaching license, you will receive a license. In other words, what matters is meeting the minimum passing score. You can find passing scores for all states that use The Praxis Series tests at http://www.ets.org/s/praxis/pdf/passing_scores.pdf or on the Web site of the state for which you are seeking certification/licensure.

7. Use your energy to take the test, not to get angry at it. Getting angry at the test only increases stress and decreases the likelihood that you will do your best. Highly qualified educators and test development professionals, all with backgrounds in teaching, worked diligently to make the test a fair and valid measure of your knowledge and skills. Your state painstakingly reviewed the test before adopting it as a licensure requirement. The best thing to do is concentrate on answering the questions.
8. Practice with Sample Test Questions

Answer practice questions and find explanations for correct answers

Sample Test Questions

This test is available via paper delivery or computer delivery; other than the delivery method, there is no difference between the tests. The test content is the same for both test delivery types. To illustrate what the computer-delivered test looks like, the following sample question shows an actual screen used in a computer-delivered test.

Here is the same sample question as it would appear on a paper-delivered test:

Which of the following is the capital of the United States?

- New York, NY
- Washington, DC
- Chicago, IL
- Los Angeles, CA

For the purposes of this guide, sample questions are provided as they would appear in a paper-delivered test.
Step 8: Practice with Sample Test Questions

The sample questions that follow illustrate the kinds of questions on the test. They are not, however, representative of the entire scope of the test in either content or difficulty. Answers with explanations follow the questions.

Directions: Each of the questions or statements below is followed by four suggested answers or completions. Select the one that is best in each case.

1. Which of the following is the correct order for the four major steps in designing a health education lesson plan?
   I. Developing instructional objectives and evaluation measures that are congruent
   II. Identifying several teaching strategies that encourage teacher modeling and student participation
   III. Setting scope and sequence parameters for the topic
   IV. Determining the general focus for the lesson plan

   (A) I, IV, III, II
   (B) II, I, III, IV
   (C) III, I, IV, II
   (D) IV, III, I, II

2. Essential amino acids are best described as those amino acids that are
   (A) required for protein synthesis but cannot be made by the body
   (B) naturally occurring substances that function in fighting infection
   (C) important components of carbohydrates, fats, and proteins
   (D) high-energy nutrients that promote growth and development

3. Which of the following high school students is most likely to lose weight safely?

<table>
<thead>
<tr>
<th>Student</th>
<th>Daily Intake (Calories)</th>
<th>Daily Expenditure (Calories)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Robert</td>
<td>3,000</td>
<td>3,000</td>
</tr>
<tr>
<td>Judy</td>
<td>3,000</td>
<td>2,000</td>
</tr>
<tr>
<td>Tim</td>
<td>2,000</td>
<td>2,800</td>
</tr>
<tr>
<td>Alice</td>
<td>1,000</td>
<td>4,000</td>
</tr>
</tbody>
</table>

4. Which of the following techniques will most accurately determine whether the fat composition of an individual's body is excessive?
   (A) Scales and a height-weight chart
   (B) Skin-fold calipers
   (C) Measurements of the circumference of waist, hips, thighs, and arms
   (D) Hydrostatic weighing

5. The presence of the ozone layer in the upper atmosphere is important because
   (A) it enhances the greenhouse effect
   (B) it has led to sharp increases in all types of skin cancer
   (C) it absorbs harmful ultraviolet radiation
   (D) it reduces the amount of acid rain and urban smog

6. Approval of AZT for use in the treatment for AIDS came under the jurisdiction of which of the following agencies?
   (A) Federal Trade Commission
   (B) Consumer Products Safety Commission
   (C) Office of Consumer Affairs
   (D) Food and Drug Administration

7. Fetal alcohol syndrome is associated with which of the following?
   (A) Phenylketonuria
   (B) Leukemia
   (C) Hepatitis
   (D) Developmental disabilities

8. Which of the following correctly describes the usual pathway that sperm take through the female reproductive tract to the site of fertilization?
   (A) Vagina, cervix, fallopian tube, uterus
   (B) Vagina, uterus, fallopian tube, cervix
   (C) Vagina, cervix, uterus, fallopian tube
   (D) Urethra, vagina, fallopian tube, uterus
9. Amniocentesis is most often used to
   (A) facilitate artificial insemination
   (B) measure immune response capability in transplant recipients
   (C) determine the presence of certain disorders in the fetus
   (D) estimate the mother’s potential for maintaining a pregnancy to term

10. Compared to younger women, women over age 35 have an increased risk of giving birth to children with which of the following genetic disorders?
   (A) Cystic fibrosis
   (B) Down syndrome
   (C) Hemophilia
   (D) Sickle cell anemia

11. Which of the following are major components of coordinated school health?
   I. Comprehensive school health education
   II. Physical education
   III. Nutrition services
   IV. Healthy school environment
   (A) I and II only
   (B) I, II, and IV only
   (C) II, III, and IV only
   (D) I, II, III, and IV

12. A high school has experienced a series of incidents of sexual harassment in the hallways. One of the health education teachers assigns students to create posters in class encouraging positive peer pressure to prevent this behavior. In this way the teacher is contributing to the school’s
   (A) healthy environment
   (B) health services
   (C) family and community involvement
   (D) counseling services

13. HIV may be transmitted from one individual to another in all of the following ways EXCEPT
   (A) through contact made during oral sex
   (B) through breastmilk from an infected mother and fed to an infant
   (C) perinatally from an infected mother to her fetus
   (D) genetically from parent to child

14. Which of the following methods would be most appropriate for students to demonstrate refusal skills?
   (A) Observing students’ behavior
   (B) Role-playing
   (C) Reading from the textbook
   (D) Creating a poster

15. When designing classroom activities to address the different learning styles of students within the integrated health classroom, the health teacher should consider the theory of multiple intelligences suggested by
   (A) Howard Gardner
   (B) John Dewey
   (C) Robert Marzano
   (D) Madelyn Hunter

16. Which of the following neurotransmitters is affected by the antidepressant Prozac?
   (A) Adrenaline
   (B) Serotonin
   (C) Epinephrine
   (D) Cortisol

17. Which of the following environmental problems is most lethal to people worldwide?
   (A) Acid rain
   (B) Air pollution
   (C) Ozone depletion
   (D) Water pollution
18. According to Centers for Disease Control and Prevention (CDC), which of the following is NOT among the top four causes of death for young people ages 15 to 24?
   (A) Suicide
   (B) Motor vehicle injuries
   (C) Homicide
   (D) Diabetes

19. When planning goals for lessons in health class, the teacher should consider all of the following as primary concerns EXCEPT
   (A) how easily the material can be presented in class
   (B) how the information presented is relevant to the learner
   (C) what motivates enthusiasm in the learner for the subject
   (D) what types of learners make up the class population

20. Which of the following best describes a formative evaluation?
   (A) Documenting the feasibility of a program implementation
   (B) Determining the effectiveness of a school system’s HIV-prevention initiative
   (C) Documenting the level of dissemination of research-based curriculum within a state
   (D) Monitoring progress in completing plans for a tobacco-prevention training event

21. Hib is best described as a type of
   (A) bacteria
   (B) immune disorder
   (C) health information system
   (D) behavioral disorder

22. Which of the following is NOT a level of behavior described by the affective domain of Bloom’s taxonomy?
   (A) Analyzing
   (B) Receiving
   (C) Responding
   (D) Valuing

23. Which of the following would require a prescription from a doctor?
   (A) Vitamin supplements
   (B) Birth control pills
   (C) Diet pills
   (D) Analgesics

24. Which of the following is NOT a major component of coordinated school health?
   (A) Physical education
   (B) Comprehensive school health education
   (C) Health insurance for students
   (D) Healthy school environment
1. The correct answer is (D). The first step in designing a lesson plan is to determine a general focus for the lesson. The goal gives direction and purpose to the instruction and promotes long-term evaluation (impact). Setting scope and sequence boundaries for the topic comes next. Both the depth of material for instruction (scope) and the order in which the material is presented influence instructional effectiveness. Considerations of scope and sequence promote lesson plans that are age- and stage-appropriate. Once the general focus and the scope/sequence boundaries have been established, specific and measurable instructional objectives are written. The objectives specify the learning/behavior to be demonstrated, determine outcome evaluation indicators, and establish the level of success for outcome evaluation. Evaluation measures are reliable when they are consistent with the instructional objectives. The last step involves the selection of a variety of teaching strategies with attention to teacher modeling and student participation.

2. The correct answer is (A). Amino acids are the building blocks of proteins. Of the 20 amino acids required for protein synthesis, nine cannot be produced by the human body. These must be supplied by the diet.

3. The correct answer is (C). To reduce body weight, more calories must be expended than are taken in. With a daily expenditure of 800 calories above intake, Tim would lose approximately two pounds per week. Alice (D), with a calorie expenditure so much greater than her calorie intake, is at risk of ketosis due to carbohydrate deficiency.

4. The best answer is (D). Underwater weighing identifies the proportion of body fat accurately by calculating specific gravity. The higher the specific gravity, the lower the fat composition.

5. The correct answer is (C). The ozone layer is a region of the upper atmosphere that forms a protective layer that prevents the Sun’s most harmful ultraviolet radiation from reaching the Earth’s surface. The depletion of the ozone layer has resulted in dramatic increases in skin cancer.

6. The correct answer is (D). The FDA is responsible for approval of medicines.

7. The correct answer is (D). Fetal exposure to alcohol is a leading cause of mental retardation.

8. The correct answer is (C). The ovum enters the flared opening of the fallopian tube after it is released from the follicle in the ovary. At ejaculation, the sperm enter the vagina and, within 15 minutes to an hour, move into the cervix, through the uterus to the fallopian tube.

9. The correct answer is (C). Amniocentesis involves the removal and examination of a small sample of cells from the amniotic cavity, enabling doctors to detect genetic disorders.

10. The correct answer is (B). The incidence of Down syndrome increases with the age of the mother. In the United States, for example, among mothers in the age range 20–30, about one in 800 newborns has Down syndrome, whereas the incidence of Down syndrome in newborns of mothers over age 40 is 1 in 100.

11. The correct answer is (D). The eight components of coordinated school health include: (1) comprehensive school health education; (2) physical education; (3) school health services; (4) school nutrition services; (5) school counseling, psychological and social services; (6) healthy school environment; (7) school-site health promotion; (8) family and community involvement in schools.

12. The correct answer is (A). A healthy school environment fosters a psychosocial climate that helps maximize the health and safety of students and staff.

13. The correct answer is (D). The first three choices illustrate ways in which HIV can be transmitted. HIV cannot be transmitted genetically.

14. The correct answer is (B). Role-playing in class is the most appropriate way for students to demonstrate refusal skills. Teachers would most likely not be able to observe students using refusal skills. Reading from a textbook and creating a poster could describe what refusal skills are, but would not allow the student to perform a demonstration in real-life situations.

15. The correct answer is (A). Howard Gardner was a Harvard professor who developed the “Theory of Multiple Intelligences,” which is based on the idea that children have different learning styles.
16. The correct answer is (B). Depression is caused by low levels of serotonin in the brain.

17. The correct answer is (D). According to the World Health Organization, between five and 10 million people worldwide die each year from exposure to polluted water.

18. The correct answer is (D). Diabetes is eleventh on the list. Motor vehicle injuries (and other intentional injuries) is first, homicide is second, and suicide is third.

19. The correct answer is (A). Options (B), (C), and (D) all are main considerations a teacher should have when planning goals for a lesson. How easily the material can be presented should not be a primary concern to the teacher.

20. The correct answer is (A). Options (B), (C), and (D) all are examples of process evaluations, while (A) is a formative evaluation.

21. The correct answer is (A). Hib stands for Haemophilus influenza Type B, which is a bacteria. Most strains of Hib are opportunistic pathogens that usually live in their host without causing disease, but cause problems only when other viral infections or reduced immune function create an opportunity.

22. The correct answer is (A). There are five major categories in the affective domain of Bloom's Taxonomy: receiving, responding, valuing, organization, and characterizing.

23. The correct answer is (B). Birth control pills are the only item listed that would require a doctor’s prescription. All of the others are available over-the-counter.

24. The correct answer is (C). There are eight components of coordinated school health: comprehensive school health education, physical education, health services, nutrition services, school counseling, healthy school environment, health promotion for staff, and family and community involvement.
9. Check on Testing Accommodations

See if you qualify for accommodations that may make it easier to take the Praxis test

What if English is not my primary language?

Praxis tests are given only in English. If your primary language is not English (PLNE), you may be eligible for extended testing time. For more details, visit www.ets.org/praxis/register/accommodations/plne.

What if I cannot take the paper-based test on Saturday?

Monday is the alternate paper-delivered test day for test takers who can't test on Saturday due to:

- religious convictions
- duties as a member of the United States armed forces

Online registration is not available for Monday test takers. You must complete a registration form and provide a photocopy of your military orders or a letter from your cleric. You'll find details at www.ets.org/praxis/register/accommodations/monday_testing.

What if I have a disability or other health-related need?

The following accommodations are available for Praxis test takers who meet the Americans with Disabilities Act (ADA) Amendments Act disability requirements:

- Extended testing time
- Additional rest breaks
- Separate testing room
- Writer/recorder of answers
- Test reader
- Sign language interpreter for spoken directions only
- Perkins Brailler
- Braille slate and stylus
- Printed copy of spoken directions
- Oral interpreter
- Audio test
- Braille test
- Large print test book (14 pt.)
- Large print answer sheet
- Listening section omitted

For more information on these accommodations, visit www.ets.org/praxis/register/disabilities.

Note: Test takers who have health-related needs requiring them to bring equipment, beverages, or snacks into the testing room or to take extra or extended breaks must request these accommodations by following the procedures described in the Bulletin Supplement for Test Takers with Disabilities or Health-Related Needs (PDF), which can be found at http://www.ets.org/praxis/register/disabilities.

You can find additional information on available resources for test takers with disabilities or health-related needs at www.ets.org/disabilities.
10. Do Your Best on Test Day

Get ready for test day so you will be calm and confident

You followed your study plan. You are prepared for the test. Now it's time to prepare for test day.

Plan to end your review a day or two before the actual test date so you avoid cramming. Take a dry run to the test center so you're sure of the route, traffic conditions, and parking. Most of all, you want to eliminate any unexpected factors that could distract you from your ultimate goal—passing the Praxis test!

On the day of the test, you should:

• be well rested
• wear comfortable clothes and dress in layers
• eat before you take the test and bring food with you to eat during break to keep your energy level up
• bring an acceptable and valid photo identification with you
• bring a supply of well-sharpened No. 2 pencils (at least 3) and a blue or black pen for the essay or constructed-response tests
• be prepared to stand in line to check in or to wait while other test takers check in
• select a seat away from doors, aisles, and other high-traffic areas

You can't control the testing situation, but you can control yourself. Stay calm. The supervisors are well trained and make every effort to provide uniform testing conditions, but don't let it bother you if the test doesn't start exactly on time. You will have the necessary amount of time once it does start.

You can think of preparing for this test as training for an athletic event. Once you've trained, prepared, and rested, give it everything you've got.

What items am I restricted from bringing into the test center?

You cannot bring into the test center personal items such as:

• handbags, knapsacks, or briefcases
• water bottles or canned or bottled beverages
• study materials, books, or notes
• scrap paper
• any electronic, photographic, recording, or listening devices

Note: All cell phones, smart phones (e.g., BlackBerry®, devices, iPhones®, etc.), PDAs, and other electronic, photographic, recording, or listening devices are strictly prohibited from the test center. If you are seen with such a device, you will be dismissed from the test, your test scores will be canceled, and you will forfeit your test fees. If you are seen USING such a device, the device will be confiscated and inspected. For more information on what you can bring to the test center, visit www.ets.org/praxis/test_day/bring.
Are You Ready?

Complete this checklist to determine whether you are ready to take your test.

- Do you know the testing requirements for the license or certification you are seeking in the state(s) where you plan to teach?
- Have you followed all of the test registration procedures?
- Do you know the topics that will be covered in each test you plan to take?
- Have you reviewed any textbooks, class notes, and course readings that relate to the topics covered?
- Do you know how long the test will take and the number of questions it contains?
- Have you considered how you will pace your work?
- Are you familiar with the types of questions for your test?
- Are you familiar with the recommended test-taking strategies?
- Have you practiced by working through the practice questions in this study companion or in a study guide or practice test?
- If constructed-response questions are part of your test, do you understand the scoring criteria for these items?
- If you are repeating a Praxis test, have you analyzed your previous score report to determine areas where additional study and test preparation could be useful?

If you answered “yes” to the questions above, your preparation has paid off. Now take the Praxis test, do your best, pass it—and begin your teaching career!
Appendix: Other Questions You May Have

Here is some supplemental information that can give you a better understanding of the Praxis tests.

What do the Praxis tests measure?
The Praxis tests measure the specific pedagogical skills and knowledge that beginning teachers need. The tests do not measure an individual's disposition toward teaching or potential for success. The assessments are designed to be comprehensive and inclusive, but are limited to what can be covered in a finite number of questions and question types.

What are the Praxis I tests?
The Praxis I tests measure basic skills in reading, writing, and mathematics. All these tests include multiple-choice questions and the Writing test also includes an essay question. Praxis I tests are designed to evaluate whether you have the academic skills needed to prepare for a career in education.

What are the Praxis II tests?
Praxis II Subject Assessments measure knowledge of specific subjects that K–12 educators teach, as well as general and subject-specific teaching skills and knowledge. Ranging from Agriculture to World Languages, there are more than 130 Praxis II tests, which contain multiple-choice or constructed-response questions, or a combination of both.

What is the difference between Praxis multiple-choice and constructed-response tests?
Multiple-choice tests measure a broad range of knowledge across your content area. Constructed-response tests measure your ability to provide in-depth explanations of a few essential topics in a given subject area. Content-specific Praxis II pedagogy tests, most of which are constructed-response, measure your understanding of how to teach certain fundamental concepts in a subject area.

The tests do not measure your actual teaching ability, however. Teaching combines many complex skills that are typically measured in other ways, including classroom observation, videotaped practice, or portfolios not included in the Praxis test.

Who takes the tests and why?
Some colleges and universities use the Praxis I tests to evaluate individuals for entry into teacher education programs. The assessments are generally taken early in your college career. Many states also require Praxis I scores as part of their teacher licensing process.

Individuals entering the teaching profession take the Praxis II tests as part of the teacher licensing and certification process required by many states. In addition, some professional associations and organizations require Praxis II tests for professional licensing.

Do all states require these tests?
The Praxis Series tests are currently required for teacher licensure in approximately 40 states and United States territories. These tests are also used by several professional licensing agencies and by several hundred colleges and universities. Teacher candidates can test in one state and submit their scores in any other state that requires Praxis testing for licensure. You can find details at www.ets.org/praxis/states.
What is licensure/certification?
Licensure in any area—medicine, law, architecture, accounting, cosmetology—is an assurance to the public that the person holding the license possesses sufficient knowledge and skills to perform important occupational activities safely and effectively. In the case of teacher licensing, a license tells the public that the individual has met predefined competency standards for beginning teaching practice.

Because a license makes such a serious claim about its holder, licensure tests are usually quite demanding. In some fields, licensure tests have more than one part and last for more than one day. Candidates for licensure in all fields plan intensive study as part of their professional preparation. Some join study groups, others study alone. But preparing to take a licensure test is, in all cases, a professional activity. Because it assesses the entire body of knowledge for the field you are entering, preparing for a licensure exam takes planning, discipline, and sustained effort.

Why does my state require The Praxis Series tests?
Your state chose The Praxis Series tests because they assess the breadth and depth of content—called the “domain”—that your state wants its teachers to possess before they begin to teach. The level of content knowledge, reflected in the passing score, is based on recommendations of panels of teachers and teacher educators in each subject area. The state licensing agency and, in some states, the state legislature ratify the passing scores that have been recommended by panels of teachers.

How were the tests developed?
ETS consulted with practicing teachers and teacher educators around the country during every step of The Praxis Series test development process. First, ETS asked them which knowledge and skills a beginning teacher needs to be effective. Their responses were then ranked in order of importance and reviewed by hundreds of teachers.

After the results were analyzed and consensus was reached, guidelines, or specifications, for the multiple-choice and constructed-response tests were developed by teachers and teacher educators. Following these guidelines, teachers and professional test developers created test questions that met content requirements and ETS Standards for Quality and Fairness.*

When your state adopted the research-based Praxis tests, local panels of teachers and teacher educators evaluated each question for its relevance to beginning teachers in your state. During this “validity study,” the panel also provided a passing-score recommendation based on how many of the test questions a beginning teacher in your state would be able to answer correctly. Your state’s licensing agency determined the final passing-score requirement.

ETS follows well-established industry procedures and standards designed to ensure that the tests measure what they are intended to measure. When you pass the Praxis tests your state requires, you are proving that you have the knowledge and skills you need to begin your teaching career.

How are the tests updated to ensure the content remains current?

Praxis tests are reviewed regularly. During the first phase of review, ETS conducts an analysis of relevant state and association standards and of the current test content. State licensure titles and the results of relevant job analyses are also considered. Revised test questions are then produced following the standard test development methodology. National advisory committees may also be convened to review existing test specifications and to evaluate test forms for alignment with the specifications.

How long will it take to receive my scores?

Scores for computer-delivered tests are available faster than scores for paper-delivered tests. Scores for most computer-delivered multiple-choice tests are reported on the screen immediately after the test. Scores for tests that contain constructed-response questions or essays aren’t available immediately after the test because of the scoring process involved. Official scores for computer-delivered tests are reported to you and your designated score recipients approximately two to three weeks after the test date. Scores for paper-delivered tests will be available within four weeks after the test date. See the test dates and deadlines calendar at www.ets.org/praxis/register/centers_dates for exact score reporting dates.

Can I access my scores on the Web?

All test takers can access their test scores via their Praxis account free of charge for one year from the posting date. This online access replaces the mailing of a paper score report.

The process is easy—simply log in to your Praxis account at www.ets.org/praxis and click on your score report. If you do not already have a Praxis account, you must create one to view your scores.

Note: You must create a Praxis account to access your scores, even if you registered by mail or phone.
Your teaching career is worth preparing for, so start today!
