Welcome to The Praxis™ Study Companion

Prepare to Show What You Know

You have gained the knowledge and skills you need for your teaching career. Now you are ready to demonstrate your abilities by taking a Praxis™ test.

Using The Praxis Study Companion is a smart way to prepare for the test so you can do your best on test day. This guide can help keep you on track and make the most efficient use of your study time.

The Study Companion contains practical information and helpful tools, including:

• An overview of the tests
• Specific information on the Praxis test you are taking
• A template study plan
• Practice questions and explanations of correct answers
• Test-taking tips and strategies
• Frequently asked questions
• Links to more detailed information

So where should you start? Begin by reviewing this guide in its entirety and note those sections that you need to revisit. Then you can create your own personalized study plan and schedule based on your individual needs and how much time you have before test day.

Keep in mind that study habits are individual. There are many different ways to successfully prepare for your test. Some people study better on their own, while others prefer a group dynamic. You may have more energy early in the day, but another test taker may concentrate better in the evening. So use this guide to develop the approach that works best for you.

Your teaching career begins with preparation. Good luck!
Table of Contents

The Praxis™ Study Companion guides you through the 10 steps to success

1. Know What to Expect .............................................................................................................. 4
Familiarize yourself with the Praxis tests so you know what to expect

2. Familiarize Yourself with Test Questions ........................................................................... 5
Become comfortable with the types of questions you’ll find on the Praxis tests

3. Understand Your Scores ...................................................................................................... 9
Understand how tests are scored and how to interpret your test scores

4. Learn About Your Test .......................................................................................................... 11
Learn about the specific test you will be taking

5. Determine Your Strategy for Success ................................................................................. 17
Set clear goals and deadlines so your test preparation is focused and efficient

6. Develop Your Study Plan ..................................................................................................... 20
Develop a personalized study plan and schedule

7. Review Smart Tips for Success .......................................................................................... 24
Follow test-taking tips developed by experts

8. Practice with Sample Test Questions .................................................................................. 26
Answer practice questions and find explanations for correct answers

9. Check on Testing Accommodations .................................................................................... 33
See if you qualify for accommodations that may make it easier to take the Praxis test

10. Do Your Best on Test Day .................................................................................................. 34
Get ready for test day so you will be calm and confident

Appendix: Other Questions You May Have ........................................................................... 36
1. Know What to Expect

Familiarize yourself with the Praxis tests so you know what to expect

Which test should I take?

Each state or agency that uses the Praxis tests sets its own requirements for which test or tests you must take for the teaching area you wish to pursue.

Before you register for a test, confirm your state or agency’s testing requirements at www.ets.org/praxis/states.

How are the Praxis tests given?

Praxis tests are given in both computer and paper formats. Note: Not all Praxis tests are offered in both formats.

Should I take the computer- or paper-delivered test?

You should take the test in whichever format you are most comfortable. Some test takers prefer taking a paper-and-pencil test, while others are more comfortable on a computer. Please note that not all tests are available in both formats. To help you decide, watch the What to Expect on Test Day video for computer-delivered tests.

If I’m taking more than one Praxis test, do I have to take them all in the same format?

No. You can take each test in the format in which you are most comfortable.

Is there a difference between the subject matter covered on the computer-delivered test and the paper-delivered test?

No. The computer-delivered test and paper-delivered test cover the same content.

Where and when are the Praxis tests offered?

You can select the test center that is most convenient for you. The Praxis tests are administered through an international network of test centers, which includes some universities, high schools, Prometric® Testing Centers, and other locations throughout the world.

Testing schedules depend on whether you are taking computer-delivered tests or paper-delivered tests. See the Praxis Web site for more detailed test registration information at www.ets.org/praxis/register.
2. Familiarize Yourself with Test Questions

_Become comfortable with the types of questions you’ll find on the Praxis tests_

The _Praxis_ tests include two types of questions — _multiple-choice_ (for which you select your answers from a list of choices) and _constructed-response_ (for which you write a response of your own). You may be familiar with these question formats from taking other standardized tests. If not, familiarize yourself with them so you don’t spend time during the test figuring out how to answer them.

**Understanding Multiple-Choice Questions**

Many multiple-choice questions begin with the phrase “which of the following.” Take a look at this example:

Which of the following is a flavor made from beans?
(A) Strawberry  
(B) Cherry  
(C) Vanilla  
(D) Mint

**How would you answer this question?**

All of the answer choices are flavors. Your job is to decide which of the flavors is the one made from beans.

Try following these steps to select the correct answer.

1) **Limit your answer to one of the choices given.** You may know that chocolate and coffee are also flavors made from beans, but they are not listed. Rather than thinking of other possible answers, focus only on the choices given (“which of the following”).

2) **Eliminate incorrect answers.** You may know that strawberry and cherry flavors are made from fruit and that mint flavor is made from a plant. That leaves vanilla as the only possible answer.

3) **Verify your answer.** You can substitute “vanilla” for the phrase “which of the following” and turn the question into this statement: “Vanilla is a flavor made from beans.” This will help you be sure that your answer is correct. If you're still uncertain, try substituting the other choices to see if they make sense. You may want to use this technique as you answer multiple-choice questions on the practice tests.
Try a more challenging example

The vanilla bean question is pretty straightforward, but you’ll find that more challenging questions have a similar structure. For example:

Entries in outlines are generally arranged according to which of the following relationships of ideas?

(A) Literal and inferential
(B) Concrete and abstract
(C) Linear and recursive
(D) Main and subordinate

You’ll notice that this example also contains the phrase “which of the following.” This phrase helps you determine that your answer will be a “relationship of ideas” from the choices provided. You are supposed to find the choice that describes how entries, or ideas, in outlines are related.

Sometimes it helps to put the question in your own words. Here, you could paraphrase the question in this way: “How are outlines usually organized?” Since the ideas in outlines usually appear as main ideas and subordinate ideas, the answer is (D).

**QUICK TIP:** Don’t be intimidated by words you may not understand. It might be easy to be thrown by words like “recursive” or “inferential.” Read carefully to understand the question and look for an answer that fits. An outline is something you are probably familiar with and expect to teach to your students. So slow down, and use what you know.

Watch out for multiple-choice questions containing “NOT,” “LEAST,” and “EXCEPT”

This type of question asks you to select the choice that does not fit. You must be very careful because it is easy to forget that you are selecting the negative. This question type is used in situations in which there are several good solutions or ways to approach something, but also a clearly wrong way.

How to approach questions about graphs, tables, or reading passages

When answering questions about graphs, tables, or reading passages, provide only the information that the questions ask for. In the case of a map or graph, you might want to read the questions first, and then look at the map or graph. In the case of a long reading passage, you might want to go ahead and read the passage first, marking places you think are important, and then answer the questions. Again, the important thing is to be sure you answer the questions as they refer to the material presented. So read the questions carefully.

How to approach unfamiliar formats

From time to time, new question formats are developed to find new ways of assessing knowledge. The latest tests may include audio and video components, such as a movie clip or animation, instead of the more traditional map or reading passage. Other tests may allow you to zoom in on details of a graphic or picture. Tests may also include interactive questions that take advantage of technology to assess knowledge and skills. They can assess knowledge more than standard multiple-choice questions can. If you see a format you are not familiar with, read the directions carefully. They always give clear instructions on how you are expected to respond.

For most questions, you will respond by clicking an oval to select a single answer from a list of options. Other questions may ask you to respond in the following ways:
Step 2: Familiarize Yourself with Test Questions

- **Typing in an entry box.** When the answer is a number, you may be asked to enter a numerical answer or, if the test has an on-screen calculator, you may need to transfer the calculated result from the calculator to the entry box. Some questions may have more than one place to enter a response.

- **Clicking check boxes.** You may be asked to click check boxes instead of an oval when more than one choice within a set of answers can be selected.

- **Clicking parts of a graphic.** In some questions, you will select your answers by clicking on a location (or locations) on a graphic such as a map or chart, as opposed to choosing your answer from a list.

- **Clicking on sentences.** In questions with reading passages, you may be asked to choose your answers by clicking on a sentence (or sentences) within the reading passage.

- **Dragging and dropping answer choices into targets on the screen.** You may be asked to select answers from a list of options and drag your answers to the appropriate location in a table, paragraph of text or graphic.

- **Selecting options from a drop-down menu.** You may be asked to choose answers by selecting options from a drop-down menu (e.g., to complete a sentence).

Remember that with every question you will get clear instructions on how to respond. See the [Praxis Computer-delivered Testing Demonstration](https://www.praxis.org) on the Praxis website to learn more about Praxis tests and to see examples of some of the types of questions you may encounter.

**QUICK TIP:** Don't make the questions more difficult than they are. Don't read for hidden meanings or tricks. There are no trick questions on Praxis tests. They are intended to be serious, straightforward tests that accurately assess your knowledge.

### Understanding Constructed-Response Questions

 Constructed-response questions require you to demonstrate your knowledge in a subject area by providing in-depth explanations on particular topics. Essay and problem solving are types of constructed-response questions.

For example, an essay question might present you with a topic and ask you to discuss the extent to which you agree or disagree with the opinion stated. You must support your position with specific reasons and examples from your own experience, observations, or reading.

Take a look at a few sample essay topics:

- “Celebrities have a tremendous influence on the young, and for that reason, they have a responsibility to act as role models.”
- “We are constantly bombarded by advertisements—on television and radio, in newspapers and magazines, on highway signs, and the sides of buses. They have become too pervasive. It’s time to put limits on advertising.”
- “Advances in computer technology have made the classroom unnecessary, since students and teachers are able to communicate with one another from computer terminals at home or at work.”

A problem-solving question might ask you to solve a mathematics problem such as the one below and show how you arrived at your solution:

a) In how many different ways can 700 be expressed as the product of two positive integers? Show how you arrived at your answer.

b) Among all pairs of positive integers whose product is 700, which pair has the maximum greatest common divisor? Explain how you arrived at your answer.
Keep these things in mind when you respond to a constructed-response question

1) **Answer the question accurately.** Analyze what each part of the question is asking you to do. If the question asks you to describe or discuss, you should provide more than just a list.

2) **Answer the question completely.** If a question asks you to do three distinct things in your response, you should cover all three things for the best score. Otherwise, no matter how well you write, you will not be awarded full credit.

3) **Answer the question that is asked.** Do not change the question or challenge the basis of the question. You will receive no credit or a low score if you answer another question or if you state, for example, that there is no possible answer.

4) **Give a thorough and detailed response.** You must demonstrate that you have a thorough understanding of the subject matter. However, your response should be straightforward and not filled with unnecessary information.

5) **Reread your response.** Check that you have written what you thought you wrote. Be sure not to leave sentences unfinished or omit clarifying information.

**QUICK TIP:** You may find that it helps to circle each of the details of the question in your test book or take notes on scratch paper so that you don’t miss any of them. Then you’ll be sure to have all the information you need to answer the question.

For tests that have constructed-response questions, more detailed information can be found in “4. Learn About Your Test” on page 11.

**Understanding Computer-Delivered Questions**

Questions on computer-delivered tests are interactive in the sense that you answer by selecting an option or entering text on the screen. If you see a format you are not familiar with, read the directions carefully. The directions always give clear instructions on how you are expected to respond.

Interactive question types may ask you to respond by:

- Typing in an entry box, particularly for a constructed-response question.
- Clicking an oval answer option for a multiple-choice question.
- Clicking on sentences. In questions with reading passages, you may be asked to choose your answer by clicking on a sentence or sentences within the reading passage.

Perhaps the best way to understand computer-delivered questions is to view the [Computer-delivered Testing Demonstration](#) on the Praxis Web site to learn how a computer-delivered test works and see examples of some types of questions you may encounter.
3. Understand Your Scores

*Understand how tests are scored and how to interpret your test scores*

Of course, passing the Praxis test is important to you so you need to understand what your scores mean and what your state requirements are.

**What are the score requirements for my state?**

States, institutions, and associations that require the tests set their own passing scores. Visit [www.ets.org/praxis/states](http://www.ets.org/praxis/states) for the most up-to-date information.

**If I move to another state, will my new state accept my scores?**

*The Praxis Series* tests are part of a national testing program, meaning that they are required in more than one state for licensure. The advantage of a national program is that if you move to another state that also requires *Praxis* tests, you can transfer your scores. Each state has specific test requirements and passing scores, which you can find at [www.ets.org/praxis/states](http://www.ets.org/praxis/states).

**How do I know whether I passed the test?**

Your score report will include information on passing scores for the states you identified as recipients of your test results. If you test in a state with automatic score reporting, you will receive passing score information for that state.

A list of states and their passing scores for each test are available online at [www.ets.org/praxis/states](http://www.ets.org/praxis/states).

**What your Praxis scores mean**

You received your score report. Now what does it mean? It’s important to interpret your score report correctly and to know what to do if you have questions about your scores.

To access *Understanding Your Praxis Scores*, a document that provides additional information on how to read your score report, visit [www.ets.org/praxis/scores/understand](http://www.ets.org/praxis/scores/understand).

**Put your scores in perspective**

Your score report indicates:

- Your score and whether you passed
- The range of possible scores
- The raw points available in each content category
- The range of the middle 50 percent of scores on the test
- Your Recognition of Excellence (ROE) Award status, if applicable (found at [www.ets.org/praxis/scores/understand/roe](http://www.ets.org/praxis/scores/understand/roe))

If you have taken the same test or other tests in *The Praxis Series* over the last 10 years, your score report also lists the highest score you earned on each test taken.
Content category scores and score interpretation

On many of the Praxis tests, questions are grouped into content categories. To help you in future study or in preparing to retake the test, your score report shows how many "raw points" you earned in each content category. Compare your "raw points earned" with the maximum points you could have earned ("raw points available"). The greater the difference, the greater the opportunity to improve your score by further study.

Score scale changes

ETS updates Praxis tests on a regular basis to ensure they accurately measure the knowledge and skills that are required for licensure. Updated tests cover the same content as the previous tests. However, scores might be reported on a different scale, so requirements may vary between the new and previous versions. All scores for previous, discontinued tests are valid and reportable for 10 years.

These resources may also help you interpret your scores:

- Understanding Your Praxis Scores (PDF), found at [www.ets.org/praxis/scores/understand](http://www.ets.org/praxis/scores/understand)
- The Praxis Series Passing Scores (PDF), found at [www.ets.org/praxis/scores/understand](http://www.ets.org/praxis/scores/understand)
- State requirements, found at [www.ets.org/praxis/states](http://www.ets.org/praxis/states)

About This Test

The Earth and Space Sciences: Content Knowledge test is designed to assess whether an examinee has the knowledge and competencies necessary for a beginning teacher of Earth and Space Sciences in a secondary school.

The 100 multiple-choice questions address the examinee’s knowledge of fundamental concepts, methods, principles, phenomena, and interrelationships.

Questions are derived from topics typically covered in introductory college-level courses in the Earth and Space Sciences, including geology, meteorology, oceanography, astronomy, and environmental science.

The questions require a variety of abilities, including an emphasis on comprehension of critical concepts, analysis to address and solve problems, and an understanding of important terms. Some questions may require the examinee to integrate content from more than one content area.

The test covers the six broad content areas of basic scientific principles of Earth and Space Sciences, tectonics and internal Earth processes, Earth materials and surface processes, history of the Earth and its life-forms, Earth's atmosphere and hydrosphere, and astronomy.

This test may contain some questions that will not count toward your score.
Topics Covered

Representative descriptions of topics covered in each category are provided below.

I. Basic Scientific Principles of Earth and Space Sciences
   A. Science Methodology, Techniques, and History
      1. Scientific inquiry methods
         a. Observations, hypotheses, experiments, conclusions, theories, models, and laws
         b. Experimental design, including variables, controls, and sources of error
         c. Scientific knowledge is consistent with evidence, subject to change
      2. Collect, evaluate, process, interpret, and report data
         a. Units of measurement
         b. Scale (orders of magnitude), uncertainty in measurement, accuracy versus precision
         c. Appropriate calculations and conversions
         d. Scientific notation and significant figures
         e. Organization and presentation of data
         f. Interpretation of data using inductive and deductive reasoning processes
      3. Interpret and draw conclusions from models and data presented in various forms
         a. Trends in data
         b. Maps (e.g., geologic, topographic, weather)
         c. Models (e.g., Earth systems, solar system)
         d. Map projections
         e. Tables, graphs, charts, and cross sections
      4. Use materials and equipment in the laboratory and the field safely and appropriately
         a. Preparation, use, storage, and disposal of materials
         b. Use and calibration of equipment
         c. Safety procedures
         d. Value and limitations of investigative technology
            - computer as a tool (e.g., modeling, Internet)
            - data gathering and collection of evidence (e.g., ground-based versus space-based telescope)
      5. Ocean and space exploration and the use of various technologies to gather data
         a. Satellites, space probes, remote sensing
         b. Telescopes, spectroscopy
         c. Search for water and life on other planets
         d. Submersibles, research ships, sonar
      6. Historical roots of the Earth and Space Sciences
         a. How current concepts in Earth and Space Science developed over time
         b. Major historical figures and their contributions
   B. Basic Principles of Matter and Energy
      1. Structure of matter
         a. Atoms, molecules, ions, elements, and compounds
         b. Mixtures, solutions, and precipitates
         c. Solids, liquids, gases, plasmas
         d. Kinetic molecular theory of gases and the ideal gas laws
      2. Relationships between energy and matter
         a. Conservation of matter in chemical processes
         b. Conservation of energy
         c. Forms of energy
         d. Methods of thermal energy transfer
         e. Specific heat capacity
         f. Energy required for phase transitions
         g. Temperature scales
         h. Thermal expansion and contraction
      3. Nuclear reactions
         a. Radioactive decay processes (e.g., isotopes, half-life)
         b. Fusion and fission
         c. Heat production in nuclear reactions
      4. Biological, chemical, and physical processes
         a. Chemical and physical properties and changes (e.g., solubility, pH, oxidation, phase changes)
b. Chemical bonding

c. Wave properties and phenomena (e.g., wavelength, frequency, amplitude, reflection, refraction)

d. Electromagnetic spectrum (e.g., visible, infrared, ultraviolet, gamma)

e. Photosynthesis and respiration

f. Forces and motion (e.g., gravity, friction)

C. Science, Technology, and Society

1. Impact of science and technological advancements on the environment
   a. Interrelationships between humans and the hydrosphere (e.g., water pollution and treatment, acid rain, impact of sea level rise on populations, availability of water resources, irrigation, desalinization)
   b. Interrelationships between humans and the atmosphere (e.g., air pollution, greenhouse gases, importance of UV absorption by stratospheric ozone, ozone layer depletion)
   c. Impact of human activity on the natural fluctuations in global systems (e.g., rate of climate change, rate of sea level change, rate of depletion of aquifers)

2. Issues associated with the use of various energy sources
   a. Renewable and nonrenewable energy sources
   b. Energy conservation
   c. Pros and cons of power production based on various types of sources, such as fossil fuel, nuclear, hydro, solar, wind, and geothermal

3. Issues associated with the use and extraction of various Earth resources
   a. Mining-related effects
   b. Increased erosion
   c. Deforestation
   d. Degradation of soils (e.g., agricultural practices)

4. Importance of Earth and Space Sciences to everyday life
   a. Conservation of resources (e.g., recycling, sustainable technology)
   b. Waste management

   c. Technology (e.g., satellites, GPS)
   d. Human health (e.g., radon in basements of homes)
   e. Identification and prediction of natural hazards (e.g., tsunamis, earthquakes, hurricanes, coastal erosion)

II. Tectonics and Internal Earth Processes

1. Theory of plate tectonics and its supporting evidence
   a. Plate movement
   b. Convergent, divergent, and transform boundaries
   c. Hot spots
   d. Potential driving forces (e.g., mantle convection)
   e. Seismic, magnetic, fossil, and other evidence for plate tectonics
   f. Geographic features (e.g., trenches, mountains, rift zones)

2. Deformation of Earth's crust and resulting features
   a. Folds and faults
   b. Mountain building and rifting
   c. Compression, tension, and shear stresses
   d. Isostasy (e.g., postglacial rebound)

3. Characteristics of earthquakes and how they provide information about Earth's interior
   a. Distribution and types (deep versus shallow)
   b. Magnitude and intensity
   c. Seismic waves and seismograms
   d. Epicenter, focus
   e. Causes of earthquakes

4. Layered structure of Earth and related processes
   a. Characteristics and composition of the crust, mantle, and core
   b. Properties of the lithosphere and asthenosphere
   c. Evidence from seismic waves
   d. Shape and size of Earth
   e. Magnetic field and geomagnetic reversals
5. **Volcanic characteristics and processes**
   a. How volcanoes are formed
   b. Features of volcanoes (e.g., vent, magma chamber) and eruptive products (e.g., pyroclastics, gases)
   c. Types of volcanoes and their characteristics
   d. Distribution (e.g., ring of fire, hot spots)

**III. Earth Materials and Surface Processes**

1. **Identification of minerals**
   a. Definition of a mineral
   b. Physical properties (e.g., density, streak, cleavage, luster, crystal structure)
   c. Identification tools (e.g., Mohs’ hardness scale)

2. **Cycling of Earth materials**
   a. Rock cycle
   b. Water cycle
   c. Carbon cycle

3. **Characteristics and formation of igneous, sedimentary, and metamorphic rocks**
   a. Rock identification and classification
   b. Formation and characteristics of the following:
      - intrusive and extrusive igneous rock
      - clastic, chemical, and biological sedimentary rocks
      - regional and contact metamorphic rocks

4. **Earth’s surface changes over time**
   a. Chemical and physical weathering
   b. Erosion and deposition
   c. Uplift
   d. Interaction between the biosphere and the geosphere (e.g., weathering caused by plants, nutrient uptake from soil by plants)
   e. Interaction between the hydrosphere and the geosphere (e.g., cave formation, ocean salinity, streams, and drainage systems)
   f. Processes of soil formation and resulting characteristics (e.g., soil profiles, factors such as geology, climate, time)

**IV. History of the Earth and its Life-Forms**

1. **Rocks are used to determine geologic time and provide a record of Earth’s history**
   a. Principle of uniformitarianism (e.g., definition, applications, limitations)
   b. Principles of relative age dating including:
      - principle of original horizontality
      - principle of superposition
      - principle of cross-cutting relationships
      - principle of fossil succession
      - stratigraphic correlation
      - unconformities
   c. Principles of absolute (radiometric) age dating
   d. Geologic time scale (e.g., Earth’s age, scope of time)

2. **Fossil record as evidence of the origin and development of life**
   a. Origin of major groups of life-forms
   b. Fossilization methods
   c. Mass extinctions
   d. Fossil evidence for major divisions of the geologic time scale

3. **Theories of Earth’s formation and development of its systems including the history of the following:**
   a. Earth’s atmosphere
   b. Earth’s hydrosphere
   c. Earth’s landmasses
V. Earth’s Atmosphere and Hydrosphere

1. Unusual properties of water and effect on Earth systems
   a. Density changes (e.g., ice floats in water)
   b. Excellent solvent
   c. High specific heat and heat of vaporization
   d. Exists as solid, liquid, and gas on Earth

2. Water cycle and the energy transfers involved
   a. Phase changes (e.g., vaporization, condensation, sublimation)
   b. General structure of the water cycle
   c. Distribution of water on Earth

3. Basic structure and composition of the atmosphere
   a. Chemical composition
   b. Various layers and their physical properties (e.g., stratosphere, troposphere, thermosphere)
   c. Interaction of the atmosphere with hydrosphere/biosphere/geosphere (e.g., respiration, transpiration, photosynthesis, nitrogen fixation, evaporation, precipitation, effect of the atmosphere on weathering)

4. Basic physical principles and processes involved in meteorology
   a. Variations in atmospheric temperature, pressure, and density
   b. Energy budget (e.g., energy absorption and reflection)
   c. Processes involving greenhouse gases
   d. Circulation, Coriolis effect
   e. Cloud formation
   f. Origin of wind
   g. Absolute and relative humidity
   h. Dew point and frost point
   i. Daily/seasonal/annual variations in meteorology (e.g., sea breezes, monsoons, El Niño)

5. Development and movement of weather systems
   a. Cloud types
   b. Formation of various types of precipitation
   c. Air masses, fronts, storms, and severe weather such as hurricanes and tornados
   d. Development and movement of weather patterns
   e. Interpretation of atmospheric data (e.g., dew point, isobars)
   f. Fundamentals of weather forecasting

6. Factors and processes that influence climate and lead to climate zones
   a. Effects of the following:
      – latitude, geographical location, and elevation
      – atmospheric circulation (e.g., trade winds, jet stream)
      – ocean circulation
   b. Characteristics and locations of climate zones
   c. Effect of the Earth’s tilt on seasons

7. Effects of natural phenomena on climate change
   a. Volcanic eruptions
   b. Asteroid impacts
   c. Variations in solar radiation

8. Characteristics and processes of surface water and groundwater
   a. Streams (e.g., erosion, deposition, channel migration)
   b. Lakes and wetlands
   c. Geyser and springs
   d. Groundwater, aquifers, water table
   e. Runoff and infiltration
   f. Porosity and permeability
   g. Hazards (e.g., flooding, sinkholes)
   h. Human interactions (e.g., wells, levees, diversion for irrigation, saltwater intrusion)
9. **Characteristics of glaciers and polar ice and how they move and change over time**
   a. Characteristics of continental and mountain glaciers
   b. Glacial-interglacial cycles, advance and retreat
   c. Depositional and erosional features
   d. Icebergs
   e. Sea ice

10. **Physical and chemical characteristics and processes of the oceans**
    a. Salinity, temperature, and density
    b. Surface currents, deep-ocean circulation
    c. El Niño, la Niña
    d. Wave formation
    e. Seafloor topography

11. **Interrelationships between the oceans and the solid Earth**
    a. Tidal effects (e.g., tidal range, tidal patterns)
    b. Wave effects (e.g., coastal erosional and depositional processes)
    c. Tsunamis
    d. Island formation and change (e.g., barrier islands, volcanic islands, atolls)
    e. Hydrothermal vents
    f. Estuaries (e.g., characteristics, formation)
    g. Marine sediments (e.g., origin, rate of deposition)
    h. Sea level changes

12. **Interrelationships between the hydrosphere and the biosphere/ atmosphere**
    a. Light penetration and photosynthesizers in oceans
    b. Upwelling of nutrients
    c. Coral reefs
    d. Organisms around hydrothermal vents

**VI. Astronomy**

1. **Earth’s motions and their characteristics and consequences**
   a. Rotation and revolution
   b. Time zones
   c. Effect of axial tilt (e.g., seasons, solstices, and equinoxes)
   d. Long-term changes in Earth’s motions

2. **Relationships within the Earth-Moon-Sun system**
   a. Tides (e.g., causes, cycles, spring, neap)
   b. Eclipses (solar, lunar)
   c. Phases of the Moon
   d. Effect of solar wind on Earth

3. **Characteristics of the components of our solar system and how they formed**
   a. Laws of motion
   b. Theories of the formation of the solar system
   c. Location, orbits, and characteristics of the planets
   d. Structure and characteristics of the Sun
   e. Structure, characteristics, and orbit of the Earth’s moon
   f. Natural satellites
   g. Characteristics of asteroids, meteoroids, comets, dwarf/minor planets

4. **Characteristics of stars and the processes that occur within them**
   a. Stages in the life cycle of stars (e.g., protostar, main sequence, white dwarf, supernova)
   b. Color, temperature, apparent brightness, and luminosity, including Hertzsprung-Russell diagram
   c. Formation of elements (e.g., carbon, iron)

5. **Characteristics of the Milky Way and other galaxies**
   a. Structure and classification of galaxies (e.g., spiral, elliptical)
   b. Relative distances and motions
   c. Supermassive black holes
   d. Dark matter

6. **Theories and observations that relate to the origin and development of the universe**
   a. Theories about the origin of the universe
   b. Redshift and background radiation
5. Determine Your Strategy for Success

Set clear goals and deadlines so your test preparation is focused and efficient

Effective Praxis test preparation doesn’t just happen. You’ll want to set clear goals and deadlines for yourself along the way. Otherwise, you may not feel ready and confident on test day. A helpful resource is the Strategies for Success video, which includes tips for preparing and studying, along with tips for reducing test anxiety.

1) Learn what the test covers.

You may have heard that there are several different versions of the same test. It’s true. You may take one version of the test and your friend may take a different version a few months later. Each test has different questions covering the same subject area, but both versions of the test measure the same skills and content knowledge.

You’ll find specific information on the test you’re taking in “4. Learn About Your Test” on page 11, which outlines the content categories that the test measures and what percentage of the test covers each topic. Visit www.ets.org/praxis/testprep for information on other Praxis tests.

2) Assess how well you know the content.

Research shows that test takers tend to overestimate their preparedness—this is why some test takers assume they did well and then find out they did not pass.

The Praxis tests are demanding enough to require serious review of likely content, and the longer you’ve been away from the content, the more preparation you will most likely need. If it has been longer than a few months since you’ve studied your content area, make a concerted effort to prepare.

3) Collect study materials.

Gathering and organizing your materials for review are critical steps in preparing for the Praxis tests. Consider the following reference sources as you plan your study:

- Did you take a course in which the content area was covered? If yes, do you still have your books or your notes?
- Does your college library have a good introductory college-level textbook in this area?
- Does your local library have a high school-level textbook?

Study guides are available for purchase for many Praxis tests at www.ets.org/praxis/testprep. Each guide provides a combination of test preparation and practice, including sample questions and answers with explanations.

4) Plan and organize your time.

You can begin to plan and organize your time while you are still collecting materials. Allow yourself plenty of review time to avoid cramming new material at the end. Here are a few tips:

- Choose a test date far enough in the future to leave you plenty of preparation time at www.ets.org/praxis/register/centers_dates.
- Work backward from that date to figure out how much time you will need for review.
- Set a realistic schedule—and stick to it.
5) Practice explaining the key concepts.
Praxis tests with constructed-response questions assess your ability to explain material effectively. As a teacher, you'll need to be able to explain concepts and processes to students in a clear, understandable way. What are the major concepts you will be required to teach? Can you explain them in your own words accurately, completely, and clearly? Practice explaining these concepts to test your ability to effectively explain what you know.

6) Understand how questions will be scored.
Scoring information can be found in "3. Understand Your Scores" on page 9.

7) Develop a study plan.
A study plan provides a road map to prepare for the Praxis tests. It can help you understand what skills and knowledge are covered on the test and where to focus your attention. Use the study plan template on page 22 to organize your efforts.

And most important—get started!

Would a Study Group Work for You?

Using this guide as part of a study group

People who have a lot of studying to do sometimes find it helpful to form a study group with others who are working toward the same goal. Study groups give members opportunities to ask questions and get detailed answers. In a group, some members usually have a better understanding of certain topics, while others in the group may be better at other topics. As members take turns explaining concepts to one another, everyone builds self-confidence.

If the group encounters a question that none of the members can answer well, the group can go to a teacher or other expert and get answers efficiently. Because study groups schedule regular meetings, members study in a more disciplined fashion. They also gain emotional support. The group should be large enough so that multiple people can contribute different kinds of knowledge, but small enough so that it stays focused. Often, three to six members is a good size.

Here are some ways to use this guide as part of a study group:

• Plan the group's study program. Parts of the study plan template, beginning on page 20 can help to structure your group's study program. By filling out the first five columns and sharing the worksheets, everyone will learn more about your group's mix of abilities and about the resources, such as textbooks, that members can share with the group. In the sixth column ("Dates I will study the content"), you can create an overall schedule for your group's study program.

• Plan individual group sessions. At the end of each session, the group should decide what specific topics will be covered at the next meeting and who will present each topic. Use the topic headings and subheadings in the Test at a Glance table on page 11 to select topics, and then select practice questions, beginning on page 26.

• Prepare your presentation for the group. When it's your turn to present, prepare something that is more than a lecture. Write two or three original questions to pose to the group. Practicing writing actual questions can help you better understand the topics covered on the test as well as the types of questions you will encounter on the test. It will also give other members of the group extra practice at answering questions.
Step 5: Determine Your Strategy for Success

- **Take the practice test together.** The idea of the practice test is to simulate an actual administration of the test, so scheduling a test session with the group will add to the realism and may also help boost everyone’s confidence. Remember, complete the practice test using only the time that will be allotted for that test on your administration day.

- **Learn from the results of the practice test.** Score one another’s answer sheets. For tests that contain constructed-response questions, look at the Sample Test Questions section, which also contain sample responses to those questions and shows how they were scored. Then try to follow the same guidelines that the test scorers use.

- **Be as critical as you can.** You’re not doing your study partner(s) any favors by letting them get away with an answer that does not cover all parts of the question adequately.

- **Be specific.** Write comments that are as detailed as the comments about the sample responses. Indicate where and how your study partner(s) are doing an inadequate job of answering the question. Writing notes in the margins of the answer sheet may also help.

- **Be supportive.** Include comments that point out what your study partner(s) got right.

Then plan one or more study sessions based on aspects of the questions on which group members performed poorly. For example, each group member might be responsible for rewriting one paragraph of a response in which someone else did an inadequate job.

Whether you decide to study alone or with a group, remember that the best way to prepare is to have an organized plan. The plan should set goals based on specific topics and skills that you need to learn, and it should commit you to a realistic set of deadlines for meeting those goals. Then you need to discipline yourself to stick with your plan and accomplish your goals on schedule.
## 6. Develop Your Study Plan

*Develop a personalized study plan and schedule*

Planning your study time is important because it will help ensure that you review all content areas covered on the test. Use the sample study plan below as a guide. It shows a plan for the Praxis I® Pre-Professional Skills Test: Reading test. Following that is a study plan template that you can fill out to create your own plan. Use the “Learn about Your Test” and “Topics Covered” information beginning on page 11 to help complete it.

**Use this worksheet to:**
1. **Define Content Areas:** List the most important content areas for your test as defined in the Topics Covered section.
2. **Determine Strengths and Weaknesses:** Identify your strengths and weaknesses in each content area.
3. **Identify Resources:** Identify the books, courses, and other resources you plan to use for each content area.
4. **Study:** Create and commit to a schedule that provides for regular study periods.

7. Review Smart Tips for Success

*Follow test-taking tips developed by experts*

Learn from the experts. Take advantage of the following answers to questions you may have and practical tips to help you navigate the Praxis test and make the best use of your time.

**Should I Guess?**

Yes. Your score is based on the number of questions you answer correctly, with no penalty or subtraction for an incorrect answer. When you don’t know the answer to a question, try to eliminate any obviously wrong answers and then guess at the correct one. Try to pace yourself so that you have enough time to carefully consider every question.

**Can I answer the questions in any order?**

Yes. You can go through the questions from beginning to end, as many test takers do, or you can create your own path. Perhaps you will want to answer questions in your strongest area of knowledge first and then move from your strengths to your weaker areas. On computer-delivered tests, you can use the “Skip” function to skip a question and come back to it later. There is no right or wrong way. Use the approach that works best for you.

**Are there trick questions on the test?**

No. There are no hidden meanings or trick wording. All of the questions on the test ask about subject matter knowledge in a straightforward manner.

**Are there answer patterns on the test?**

No. You might have heard this myth: the answers on multiple-choice tests follow patterns. Another myth is that there will never be more than two questions with the same lettered answer following each other. Neither myth is true. Select the answer you think is correct based on your knowledge of the subject.

**Can I write in the test booklet or, for a computer-delivered test, on the scratch paper I am given?**

Yes. You can work out problems right on the pages of the booklet or scratch paper, make notes to yourself, mark questions you want to review later or write anything at all. Your test booklet or scratch paper will be destroyed after you are finished with it, so use it in any way that is helpful to you. But make sure to mark your answers on the answer sheet or enter them on the computer.

**Smart Tips for Taking the Test**

1. **For a paper-delivered test, put your answers in the right bubbles.** It seems obvious, but be sure that you fill in the answer bubble that corresponds to the question you are answering. A significant number of test takers fill in a bubble without checking to see that the number matches the question they are answering.

2. **Skip the questions you find extremely difficult.** Rather than trying to answer these on your first pass through the test, leave them blank and mark them in your test booklet. Pay attention to the time as you answer the rest of the questions on the test, and try to finish with 10 or 15 minutes remaining so that you
Step 7: Review Smart Tips for Success

can go back over the questions you left blank. Even if you don't know the answer the second time you read
the questions, see if you can narrow down the possible answers, and then guess.

3. Keep track of the time. Bring a watch to the test, just in case the clock in the test room is difficult for you
to see. Keep the watch as simple as possible—alarms and other functions may distract others or may violate
test security. If the test center supervisor suspects there could be an issue with your watch, they will ask you
to remove it, so simpler is better! You will probably have plenty of time to answer all of the questions, but if
you find yourself becoming bogged down in one section, you might decide to move on and come back to
that section later.

4. Read all of the possible answers before selecting one. Then reread the question to be sure the answer
you have selected really answers the question. Remember, a question that contains a phrase such as “Which
of the following does NOT …” is asking for the one answer that is NOT a correct statement or conclusion.

5. Check your answers. If you have extra time left over at the end of the test, look over each question and
make sure that you have answered it as you intended. Many test takers make careless mistakes that they
could have corrected if they had checked their answers.

6. Don't worry about your score when you are taking the test. No one is expected to answer all of the
questions correctly. Your score on this test is not analogous to your score on the GRE® or other similar-looking
(but in fact very different) tests. It doesn't matter on the Praxis tests whether you score very high or barely
pass. If you meet the minimum passing scores for your state and you meet the state's other requirements for
obtaining a teaching license, you will receive a license. In other words, what matters is meeting the minimum
passing score. You can find passing scores for all states that use The Praxis Series tests at
http://www.ets.org/s/praxis/pdf/passing_scores.pdf or on the Web site of the state for which you are
seeking certification/licensure.

7. Use your energy to take the test, not to get angry at it. Getting angry at the test only increases stress
and decreases the likelihood that you will do your best. Highly qualified educators and test development
professionals, all with backgrounds in teaching, worked diligently to make the test a fair and valid measure
of your knowledge and skills. Your state painstakingly reviewed the test before adopting it as a licensure
requirement. The best thing to do is concentrate on answering the questions.
8. Practice with Sample Test Questions

**Answer practice questions and find explanations for correct answers**

**Sample Test Questions**

The sample questions that follow illustrate the kinds of questions on the test. They are not, however, representative of the entire scope of the test in either content or difficulty. Answers with explanations follow the questions.

Directions: Each of the questions or statements below is followed by four suggested answers or completions. Select the one that is best in each case.

1. Which of the following would be expected to result from a collision between a continental lithospheric plate and an oceanic lithospheric plate?
   (A) A volcanic island arc
   (B) A chain of coastal volcanic mountains
   (C) A mid-oceanic ridge
   (D) A transform fault

2. Normally, S-P arrival intervals from a minimum of how many seismic stations are required to uniquely locate the epicenter of an earthquake?
   (A) 1
   (B) 2
   (C) 3
   (D) 4

3. Using the chart above, which of the following explains why a plagioclase crystal in an igneous rock is calcium-rich in the center but becomes progressively higher in sodium content toward the edges?
   (A) Calcium-rich plagioclase crystals need more oxygen to form, and sodium-rich plagioclase crystals need less oxygen.
   (B) Calcium-rich plagioclase crystals contain more olivine, and sodium-rich plagioclase crystals contain quartz.
   (C) Calcium-rich plagioclase crystals are usually found in basalt, and sodium-rich plagioclase crystals are usually found in granite.
   (D) Calcium-rich plagioclase crystallizes at higher temperatures, and sodium-rich plagioclase crystallizes at lower temperatures.
4. Which of the following man-made structures is most susceptible to damage by acid precipitation?
   (A) A monument made of granite
   (B) A roof made of slate
   (C) A tombstone made of marble
   (D) A statue made of gabbro

5. Which of the following sequences of events is consistent with the presence of a layer of conglomerate in bedrock just above a layer of shale?
   (A) A volcano erupted, sending lava out over a layer of shale. The lava cooled and hardened into conglomerate.
   (B) The water level of a large lake lowered. A beach then formed where previously there had been lake bottom.
   (C) One-celled organisms developed a colony on the seafloor. Shells made by these organisms accumulated and lithified, forming the conglomerate.
   (D) Mud was deposited and lithified. Subsequent contact metamorphism resulted in localized recrystallization of the shale into a conglomerate.

6. During which of the following processes within the hydrologic cycle do water molecules absorb energy?
   (A) Formation of ice from water
   (B) Formation of a cloud from water vapor
   (C) Runoff along the land surface
   (D) Evaporation from the ocean surface

7. The map above shows a mid-latitude northern hemisphere low-pressure cell with accompanying fronts. Which of the following statements about this weather system is most likely true?
   (A) The absolute humidity of the surface air at station I is higher than that at station III.
   (B) The surface wind at station II is coming from the west.
   (C) The wind at station III will shift in a counter-clockwise direction as the system moves eastward.
   (D) The atmospheric pressure at station IV is higher than at stations I, II, or III.

8. The dissolved salts in the Earth’s oceans are principally derived from
   (A) marine biological activity
   (B) atmospheric deposition
   (C) the weathering of continental rocks
   (D) the eruptions of undersea volcanoes
9. Which of the following best helps to explain why some localities have normally great tidal ranges (up to 60 feet) and others have one- to two-foot tidal ranges?
   (A) The relative positions of the Moon and Sun are different at different localities.
   (B) The Coriolis effect and rotation of the Earth tend to enhance tidal flow in the higher latitudes.
   (C) Ocean floor topography and the shape of the coastline serve to amplify tidal flow at specific localities.
   (D) Trade winds push the water into large tidal bulges near rocky shorelines.

10. In the illustration above of the Earth’s orbit about the Sun, which of the following is most likely true of the Earth at location X?
   (A) The spring equinox occurs.
   (B) The fall equinox occurs.
   (C) The winter solstice occurs in the northern hemisphere.
   (D) The summer solstice occurs in the northern hemisphere.

11. Which of the following has provided evidence that the Sun’s atmosphere contains sodium atoms?
   (A) Stars with the same spectral class as the Sun are made mostly of sodium.
   (B) The Sun gives off energy produced by the nuclear fusion of sodium in its core.
   (C) Light from the Sun has absorption lines that are consistent with the presence of sodium.
   (D) Solar samples returned to Earth by the Voyager spacecraft contained sodium.

12. As seen from Earth, the Moon goes through a series of phases due to changes in which of the following?
   (A) The amount of the Moon’s surface that is in Earth’s shadow
   (B) The amount of the illuminated side of the Moon that can be seen from Earth
   (C) The part of the Moon that faces Earth as the Moon rotates on its axis
   (D) The tilt of the Moon on its axis

13. Which of the following activities is likely to have the highest impact on biodiversity?
   (A) Copper mining in Chile
   (B) Soil erosion on the slopes of the Rocky Mountains
   (C) Large-scale deforestation of the Amazon or Congo basin tropical forests
   (D) Increased use of ethanol fuels in the United States
14. The geologic map above, from an area with little topographic relief, shows four rock units labeled A through D, from oldest to youngest. What structure is represented on the map?
   (A) Basin  
   (B) Dome  
   (C) Anticline  
   (D) Syncline

15. Which of the following has provided the most information about the structure of Earth’s core, mantle, and lower crust?
   (A) Measurement of the intensity and fluctuations of Earth’s magnetic field  
   (B) Examination of flowing lava  
   (C) Collection of samples from deep boreholes drilled into Earth  
   (D) Studies of the timing and distribution of seismic waves passing through Earth

16. Which of the following diagrams best shows where erosion and deposition take place on a river meander?
   (A)  
   (B)  
   (C)  
   (D)
17. Which of the following rocks would most likely form from the metamorphism of a shale?
   (A) Granite
   (B) Quartzite
   (C) Schist
   (D) Marble

18. Which of the following lists the gases that were most likely the largest components of Earth’s early atmosphere?
   (A) N₂ and O₃
   (B) C₂H₄ and O₂
   (C) Ne, Ar, Kr, and Rn
   (D) N₂, H₂O, CO₂, CH₄, and NH₃

19. Which of the following states that geological processes that operate now have operated in the past?
   (A) The law of reflection
   (B) The law of thermodynamics
   (C) The principle of superposition
   (D) The principle of uniformitarianism

20. Which of the following graphs best shows the relationship between mass and luminosity for main sequence stars? (Axes for all graphs have logarithmic scales.)
   (A)  
   (B)  
   (C)  
   (D)  

The Praxis™ Study Companion
1. The correct answer is (B). The collision of a continental plate with an oceanic plate results in the oceanic plate being subducted beneath the continental plate. The surface features that are formed include a deep offshore trench and a chain of coastal volcanic mountains.

2. The correct answer is (C). The arrival interval recorded at one station for a seismic event allows you to determine the distance from the station to the epicenter of the event. To determine the unique location of the epicenter, you must have seismic data from three different points/sites.

3. (D) is the correct answer. The chart shows that calcium-rich plagioclase will crystallize at higher temperatures and, therefore, before sodium-rich plagioclase, which will crystallize at lower temperatures. Since the crystals grow outward as the magma cools, the center of the feldspar crystal will form first at higher temperatures and the edges will crystallize last at lower temperatures.

4. The correct answer is (C). Marble would be particularly susceptible to acid rain because it is made primarily of the mineral calcite, which readily dissolves in acid. The other materials, which contain mostly silicate minerals, would also be affected but over a longer period of time.

5. (B) is the correct answer. Shale is a fine-grained sedimentary rock made of clay-sized particles. Conglomerate is a sedimentary rock made of various-sized particles, including pebbles. For conglomerate to form on top of shale, a change in the environment must have occurred from one that would allow the deposition of clay (such as a lake bed) to one that would allow the deposition of pebbles (such as a beach).

6. The correct answer is (D). Evaporation is an endothermic process in which water molecules absorb energy and undergo a phase change from a liquid to a gas.

7. (D) is correct. The atmospheric pressure, as contoured on the map with isobars, is highest at station IV. The other statements are not true.

8. (C) is the correct answer. The salinity of Earth’s oceans is attributed primarily to solutes produced by the weathering of continental rocks and transported to the oceans by rivers. The other choices list other plausible sources of salts, but they are all insignificant compared with the continental source.

9. (C) is the correct answer. The configuration of ocean basins and the shape of the coastline can affect the tides, causing phenomena such as standing waves and resonance. The extreme tidal range typical of localities in the Bay of Fundy is a well-known example of the influence of ocean-floor topography and coastline shape on tides.

10. (D) is the correct answer. When the Earth is at location X, the northern hemisphere receives the most direct rays of the Sun and experiences the greatest number of daylight hours. Under these conditions, it is approximately the first day of summer in the northern hemisphere.

11. (C) is correct. The chemical composition of the Sun’s atmosphere has been inferred primarily from absorption lines observed in the solar spectrum.

12. The correct answer is (B). The Moon does not emit its own light but reflects light received from the Sun. It is the position of the Earth and Moon relative to the Sun that determines the phase of the Moon. The half of the Moon that faces the Sun is always lighted (except during a lunar eclipse), and the phases that are seen from Earth are determined by how much of the lighted half is visible.

13. The correct answer is (C). Biodiversity refers to the variation in life forms found within a given ecosystem, biome, or on the entire Earth. Tropical rain forests are one of the areas with the greatest amounts of biodiversity, with large numbers of different species. Large-scale deforestation would destroy the habitats of more species than would the other options.

14. The correct answer is (B). Domes are geological features that result from upward acting pressure producing an uplifted portion of the crust dipping downward on all sides. After the area has been eroded and there is little topographic relief, the area of the dome is characterized by concentric strata that grow progressively older from the outside to the inside, with the oldest rocks exposed at the center.
15. The correct answer is (D). The structure of Earth has been inferred indirectly using the movement of the different kinds of seismic waves through different parts of Earth. P waves and S waves travel at different speeds and can pass through different Earth materials. When they move from one material to another material they are reflected or refracted. The speed and actions of these waves are used to determine characteristics of the different layers of Earth. For example, P waves can travel through solids and liquids, slowing in liquids, while S waves can only travel through solids. Since S waves are eliminated and P waves slow down at the outer core, it is inferred that the outer core acts as a liquid; since P waves speed up in the inner core, it is inferred that it is solid.

16. The correct answer is (A). The bends in rivers are called meanders. Meanders grow by erosion on the outside of the turns and deposition on the inside, due to the current being stronger on the outside than on the inside.

17. The correct answer is (C). Granite is an igneous rock, quartzite is a metamorphic rock derived from sandstone, and marble is a metamorphic rock derived from limestone. Schist is a foliated metamorphic rock derived from shale.

18. The correct answer is (D). It is believed that as Earth cooled, the gases dissolved in molten rock were gradually released, which is a process called outgassing. Therefore, the early atmosphere was believed to be made up largely of gases similar to those released by volcanic eruptions (e.g., H₂O and CO₂). It is believed that free oxygen was not abundant in the atmosphere until the evolution of photosynthetic organisms.

19. The correct answer is (D). James Hutton introduced the principle of uniformitarianism, the concept that the laws that operate today also operated in the geologic past. The geologic forces and processes that we observe today have been at work for a very long time.

20. The correct answer is (C). For stars on the main sequence, the relationship of mass to luminosity is that the more massive a main sequence star, the more luminous.
9. Check on Testing Accommodations

*See if you qualify for accommodations that may make it easier to take the Praxis test*

**What if English is not my primary language?**

*Praxis* tests are given only in English. If your primary language is not English (PLNE), you may be eligible for extended testing time. For more details, visit [www.ets.org/praxis/register/accommodations/plne](http://www.ets.org/praxis/register/accommodations/plne).

**What if I cannot take the paper-based test on Saturday?**

Monday is the alternate paper-delivered test day for test takers who can't test on Saturday due to:

- religious convictions
- duties as a member of the United States armed forces

Online registration is not available for Monday test takers. You must complete a registration form and provide a photocopy of your military orders or a letter from your cleric. You’ll find details at [www.ets.org/praxis/register/accommodations/monday_testing](http://www.ets.org/praxis/register/accommodations/monday_testing).

**What if I have a disability or other health-related need?**

The following accommodations are available for *Praxis* test takers who meet the Americans with Disabilities Act (ADA) Amendments Act disability requirements:

- Extended testing time
- Additional rest breaks
- Separate testing room
- Writer/recorder of answers
- Test reader
- Sign language interpreter for spoken directions only
- Perkins Brailler
- Braille slate and stylus
- Printed copy of spoken directions
- Oral interpreter
- Audio test
- Braille test
- Large print test book (14 pt.)
- Large print answer sheet
- Listening section omitted

For more information on these accommodations, visit [www.ets.org/praxis/register/disabilities](http://www.ets.org/praxis/register/disabilities).

**Note:** Test takers who have health-related needs requiring them to bring equipment, beverages, or snacks into the testing room or to take extra or extended breaks must request these accommodations by following the procedures described in the *Bulletin Supplement for Test Takers with Disabilities or Health-Related Needs* (PDF), which can be found at [http://www.ets.org/praxis/register/disabilities](http://www.ets.org/praxis/register/disabilities).

You can find additional information on available resources for test takers with disabilities or health-related needs at [www.ets.org/disabilities](http://www.ets.org/disabilities).
10. Do Your Best on Test Day

Get ready for test day so you will be calm and confident

You followed your study plan. You are prepared for the test. Now it’s time to prepare for test day.

Plan to end your review a day or two before the actual test date so you avoid cramming. Take a dry run to the test center so you’re sure of the route, traffic conditions, and parking. Most of all, you want to eliminate any unexpected factors that could distract you from your ultimate goal—passing the Praxis test!

On the day of the test, you should:

- be well rested
- wear comfortable clothes and dress in layers
- eat before you take the test and bring food with you to eat during break to keep your energy level up
- bring an acceptable and valid photo identification with you
- bring a supply of well-sharpened No. 2 pencils (at least 3) and a blue or black pen for the essay or constructed-response questions for a paper-delivered test
- be prepared to stand in line to check in or to wait while other test takers check in
- select a seat away from doors, aisles, and other high-traffic areas

You can't control the testing situation, but you can control yourself. Stay calm. The supervisors are well trained and make every effort to provide uniform testing conditions, but don’t let it bother you if the test doesn’t start exactly on time. You will have the necessary amount of time once it does start.

You can think of preparing for this test as training for an athletic event. Once you've trained, prepared, and rested, give it everything you’ve got.

What items am I restricted from bringing into the test center?

You cannot bring into the test center personal items such as:

- handbags, knapsacks, or briefcases
- water bottles or canned or bottled beverages
- study materials, books, or notes
- scrap paper
- any electronic, photographic, recording, or listening devices

Note: All cell phones, smart phones (e.g., BlackBerry®, devices, iPhones®, etc.), PDAs, and other electronic, photographic, recording, or listening devices are strictly prohibited from the test center. If you are seen with such a device, you will be dismissed from the test, your test scores will be canceled, and you will forfeit your test fees. If you are seen USING such a device, the device will be confiscated and inspected. For more information on what you can bring to the test center, visit www.ets.org/praxis/test_day/bring.
Step 10: Do Your Best on Test Day

Are You Ready?

Complete this checklist to determine whether you are ready to take your test.

☐ Do you know the testing requirements for the license or certification you are seeking in the state(s) where you plan to teach?

☐ Have you followed all of the test registration procedures?

☐ Do you know the topics that will be covered in each test you plan to take?

☐ Have you reviewed any textbooks, class notes, and course readings that relate to the topics covered?

☐ Do you know how long the test will take and the number of questions it contains?

☐ Have you considered how you will pace your work?

☐ Are you familiar with the types of questions for your test?

☐ Are you familiar with the recommended test-taking strategies?

☐ Have you practiced by working through the practice questions in this study companion or in a study guide or practice test?

☐ If constructed-response questions are part of your test, do you understand the scoring criteria for these items?

☐ If you are repeating a Praxis test, have you analyzed your previous score report to determine areas where additional study and test preparation could be useful?

If you answered “yes” to the questions above, your preparation has paid off. Now take the Praxis test, do your best, pass it—and begin your teaching career!
Appendix: Other Questions You May Have

Here is some supplemental information that can give you a better understanding of the Praxis tests.

What do the Praxis tests measure?
The Praxis tests measure the specific pedagogical skills and knowledge that beginning teachers need. The tests do not measure an individual’s disposition toward teaching or potential for success. The assessments are designed to be comprehensive and inclusive, but are limited to what can be covered in a finite number of questions and question types.

What are the Praxis I tests?
The Praxis I tests measure basic skills in reading, writing, and mathematics. All these tests include multiple-choice questions and the Writing test also includes an essay question. Praxis I tests are designed to evaluate whether you have the academic skills needed to prepare for a career in education.

What are the Praxis II tests?
Praxis II Subject Assessments measure knowledge of specific subjects that K–12 educators teach, as well as general and subject-specific teaching skills and knowledge. Ranging from Agriculture to World Languages, there are more than 130 Praxis II tests, which contain multiple-choice or constructed-response questions, or a combination of both.

What is the difference between Praxis multiple-choice and constructed-response tests?
Multiple-choice tests measure a broad range of knowledge across your content area. Constructed-response tests measure your ability to provide in-depth explanations of a few essential topics in a given subject area. Content-specific Praxis II pedagogy tests, most of which are constructed-response, measure your understanding of how to teach certain fundamental concepts in a subject area.

The tests do not measure your actual teaching ability, however. Teaching combines many complex skills that are typically measured in other ways, including classroom observation, videotaped practice, or portfolios not included in the Praxis test.

Who takes the tests and why?
Some colleges and universities use the Praxis I tests to evaluate individuals for entry into teacher education programs. The assessments are generally taken early in your college career. Many states also require Praxis I scores as part of their teacher licensing process.

Individuals entering the teaching profession take the Praxis II tests as part of the teacher licensing and certification process required by many states. In addition, some professional associations and organizations require Praxis II tests for professional licensing.

Do all states require these tests?
The Praxis Series tests are currently required for teacher licensure in approximately 40 states and United States territories. These tests are also used by several professional licensing agencies and by several hundred colleges and universities. Teacher candidates can test in one state and submit their scores in any other state that requires Praxis testing for licensure. You can find details at www.ets.org/praxis/states.
What is licensure/certification?
Licensure in any area—medicine, law, architecture, accounting, cosmetology—is an assurance to the public that the person holding the license possesses sufficient knowledge and skills to perform important occupational activities safely and effectively. In the case of teacher licensing, a license tells the public that the individual has met predefined competency standards for beginning teaching practice.

Because a license makes such a serious claim about its holder, licensure tests are usually quite demanding. In some fields, licensure tests have more than one part and last for more than one day. Candidates for licensure in all fields plan intensive study as part of their professional preparation. Some join study groups, others study alone. But preparing to take a licensure test is, in all cases, a professional activity. Because it assesses the entire body of knowledge for the field you are entering, preparing for a licensure exam takes planning, discipline, and sustained effort.

Why does my state require The Praxis Series tests?
Your state chose The Praxis Series tests because they assess the breadth and depth of content—called the “domain”—that your state wants its teachers to possess before they begin to teach. The level of content knowledge, reflected in the passing score, is based on recommendations of panels of teachers and teacher educators in each subject area. The state licensing agency and, in some states, the state legislature ratify the passing scores that have been recommended by panels of teachers.

How were the tests developed?
ETS consulted with practicing teachers and teacher educators around the country during every step of The Praxis Series test development process. First, ETS asked them which knowledge and skills a beginning teacher needs to be effective. Their responses were then ranked in order of importance and reviewed by hundreds of teachers.

After the results were analyzed and consensus was reached, guidelines, or specifications, for the multiple-choice and constructed-response tests were developed by teachers and teacher educators. Following these guidelines, teachers and professional test developers created test questions that met content requirements and ETS Standards for Quality and Fairness.*

When your state adopted the research-based Praxis tests, local panels of teachers and teacher educators evaluated each question for its relevance to beginning teachers in your state. During this “validity study,” the panel also provided a passing-score recommendation based on how many of the test questions a beginning teacher in your state would be able to answer correctly. Your state's licensing agency determined the final passing-score requirement.

ETS follows well-established industry procedures and standards designed to ensure that the tests measure what they are intended to measure. When you pass the Praxis tests your state requires, you are proving that you have the knowledge and skills you need to begin your teaching career.

**How are the tests updated to ensure the content remains current?**

*Praxis* tests are reviewed regularly. During the first phase of review, ETS conducts an analysis of relevant state and association standards and of the current test content. State licensure titles and the results of relevant job analyses are also considered. Revised test questions are then produced following the standard test development methodology. National advisory committees may also be convened to review existing test specifications and to evaluate test forms for alignment with the specifications.

**How long will it take to receive my scores?**

Scores for computer-delivered tests are available faster than scores for paper-delivered tests. Scores for most computer-delivered multiple-choice tests are reported on the screen immediately after the test. Scores for tests that contain constructed-response questions or essays aren't available immediately after the test because of the scoring process involved. Official scores for computer-delivered tests are reported to you and your designated score recipients approximately two to three weeks after the test date. Scores for paper-delivered tests will be available within four weeks after the test date. See the test dates and deadlines calendar at [www.ets.org/praxis/register/centers_dates](http://www.ets.org/praxis/register/centers_dates) for exact score reporting dates.

**Can I access my scores on the Web?**

All test takers can access their test scores via their *Praxis* account free of charge for one year from the posting date. This online access replaces the mailing of a paper score report.

The process is easy—simply log in to your *Praxis* account at [www.ets.org/praxis](http://www.ets.org/praxis) and click on your score report. If you do not already have a *Praxis* account, you must create one to view your scores.

**Note:** You must create a *Praxis* account to access your scores, even if you registered by mail or phone.
Your teaching career is worth preparing for, so start today!
Let the Praxis™ Study Companion guide you.
