Welcome to the *Praxis® Study Companion*

**Prepare to Show What You Know**

You have been working to acquire the knowledge and skills you need for your teaching career. Now you are ready to demonstrate your abilities by taking a *Praxis®* test.

Using the *Praxis® Study Companion* is a smart way to prepare for the test so you can do your best on test day. This guide can help keep you on track and make the most efficient use of your study time.

The *Praxis® Study Companion* contains practical information and helpful tools, including:

- An overview of the *Praxis* tests
- Specific information on the *Praxis* test you are taking
- A template study plan
- Study topics
- Practice questions and explanations of correct answers
- Test-taking tips and strategies
- Frequently asked questions
- Links to more detailed information

So where should you start? Begin by reviewing this guide in its entirety and note those sections that you need to revisit. Then you can create your own personalized study plan and schedule based on your individual needs and how much time you have before test day.

Keep in mind that study habits are individual. There are many different ways to successfully prepare for your test. Some people study better on their own, while others prefer a group dynamic. You may have more energy early in the day, but another test taker may concentrate better in the evening. So use this guide to develop the approach that works best for you.

Your teaching career begins with preparation. Good luck!

**Know What to Expect**

**Which tests should I take?**

Each state or agency that uses the *Praxis* tests sets its own requirements for which test or tests you must take for the teaching area you wish to pursue.

Before you register for a test, confirm your state or agency’s testing requirements at [www.ets.org/praxis/states](http://www.ets.org/praxis/states).

**How are the *Praxis* tests given?**

*Praxis* tests are given on computer. Other formats are available for test takers approved for accommodations (see page 39).
What should I expect when taking the test on computer?

When taking the test on computer, you can expect to be asked to provide proper identification at the test center. Once admitted, you will be given the opportunity to learn how the computer interface works (how to answer questions, how to skip questions, how to go back to questions you skipped, etc.) before the testing time begins. Watch the What to Expect on Test Day video to see what the experience is like.

Where and when are the Praxis tests offered?

You can select the test center that is most convenient for you. The Praxis tests are administered through an international network of test centers, which includes Prometric® Testing Centers, some universities, and other locations throughout the world.

Testing schedules may differ, so see the Praxis web site for more detailed test registration information at www.ets.org/praxis/register.

### About This Test

The Praxis Teaching Reading: Elementary test focuses on the knowledge and skills a beginning teacher must have to support reading and writing development in kindergarten through sixth-grade students. Built to assess the science of reading, the test is structured around the five essential components of effective reading instruction as identified by the National Reading Panel: phonemic awareness, phonics, vocabulary, fluency, and comprehension. The test also assesses the relationship between reading skills and writing instruction, since receptive and productive literacy are interrelated. Questions about assessment will be included throughout.

The test as a whole acknowledges multiple approaches to pedagogy used in tandem with content. This includes but is not limited to integrating skills and embedding student instruction within context, as well as looking at concepts in isolation in order to build upon them.

Test questions call on the individual’s knowledge of research-based reading instruction and the science of teaching reading, covering language, foundational skills and comprehension. Test takers must be able to apply that knowledge to specific instructional scenarios, including showing an understanding of how to differentiate instruction for diverse students. The test taker will be required to analyze and respond to situations involving
both entire classes and individual students at grade levels from kindergarten through grade six, including English-language learners and students with diverse needs and backgrounds.

The test includes texts from a wide range of genres and requires the candidate to be familiar with strategies for handling multiple text types with students, including print, digital, and image-based prompts.

In addition to selected-response questions, the test contains three constructed-response questions designed to allow the test taker to show understanding in the areas of early literacy, developing reading instruction, and written expression. These questions are intended to be authentic teaching tasks that require instructional decision making about such things as choosing instructional strategies and materials based on assessment information.

This test may contain some questions that will not count toward your score.

**Test Specifications**

Test specifications in this chapter describe the knowledge and skills measured by the test. Study topics to help you prepare to answer test questions can be found on page 33.

I. Phonoegal and Phonemic Awareness

A. Understands instructional methods for teaching phonological awareness (recognition of rhyme and alliteration; segmenting, blending, manipulation of syllables as well as onset and rime)

B. Understands instructional methods for teaching phonemic awareness, both basic (e.g., segmenting and blending) and advanced (e.g., deletion, substitution)

C. Knows ways to develop students’ expressive and receptive language skills

D. Knows instructional methods to teach beginning readers the concepts about print such as directionality, return sweep, parts of a book, and the form and function of print

E. Understands instructional strategies to help emergent readers fluently identify upper- and lowercase letters in various fonts

II. Phonics and Decoding

A. Understands how to teach phoneme-grapheme correspondence

B. Understands methods for teaching phonics systematically, explicitly, and recursively

C. Knows instructional methods for teaching common phonics patterns and rules (consonant digraphs, blends, diphthongs, schwa sound, syllable types, word families, etc.)

D. Knows how to teach morphological analysis (i.e., affixes, roots, and base words)

E. Knows how to teach syllable types in decoding multisyllabic words

F. Knows how to guide students to understand a wide variety of words (common, contextual, content-specific) through direct instruction and independent vocabulary learning

III. Vocabulary and Fluency

A. Understands ways to build, expand, and use expressive and receptive vocabulary

B. Understands methods for teaching vocabulary systematically, explicitly, and repeatedly in multiple contexts

C. Knows how to match an instructional method to word complexity

D. Knows multiple approaches to teaching word solving, including the use of context clues and structural analysis

E. Knows how to guide students to understand a wide variety of words (common, contextual, content-specific) through direct instruction and independent vocabulary learning

F. Understands instructional methods to foster students’ automaticity through accuracy, appropriate rate, and prosody

G. Knows methods of supporting fluent reading behaviors at the phoneme, word, and passage level

H. Knows how fluency, vocabulary, and comprehension are interrelated
IV. Comprehension of Literary and Informational Text

A. Understands how to support students’ listening comprehension and its relationship to reading comprehension

B. Knows how to support students’ speaking and listening skills as they discuss texts

C. Understands how to activate and build all students’ background knowledge to increase comprehension

D. Is familiar with methods for teaching comprehension systematically and explicitly to all learners

E. Knows how metacognition guides students’ development of monitoring their own comprehension and analysis of different types of text

F. Is familiar with strategies to guide students’ self-selection of appropriate texts to increase motivation and engagement

G. Knows how to differentiate instruction, tasks, and materials (print and digital) that are appropriate and culturally responsive to all learners

H. Understands how to teach the use of graphic and semantic organizers to support comprehension

I. Knows how to teach the genres (i.e., poetry, prose, drama), structures (i.e., story elements), and features of literary texts

J. Knows how to teach literary devices (i.e., figurative language, nuance of words, and alliteration)

K. Understands strategies for supporting readers as they construct literal and inferential meaning, including author’s use of language

L. Understands how to teach the types (i.e., biography, how-to), structures (i.e., description, cause and effect, sequence), and features of informational texts

M. Knows how to use technology to support students’ ability to critically examine online resources and foster digital literacy, to personalize learning experiences for students of different needs, and to support active learning across content areas

V. Writing

A. Written Expression

1. Understands how to teach writing as a recursive process that supports self-evaluation and expression

2. Knows systematic, explicit methods to teach the steps of the writing process to all learners

3. Knows strategies for integrating reading and writing (i.e., summarizing, annotation)

4. Knows methods to use digital tools for communication, writing, collaboration, and publishing

5. Is familiar with the defining characteristics and appropriate instructional methods for teaching the various types of writing: informational/expository, argument/persuasive/opinion, and narrative

B. Spelling and Grammar

1. Knows methods to connect the teaching of both decoding and encoding as reciprocal skills

2. Knows how to take a systematic, explicit, multisensory, and recursive approach to spelling development

3. Understands methods for teaching the structure of written language, including the rules of grammar and mechanics

VI. Assessment and Instructional Decision Making (Constructed-Response Items)

A. Developing emergent literacy learners (phonological and phonemic awareness, phonics, and decoding/encoding)

B. Supporting independent literacy learners (fluency, vocabulary, comprehension, writing)

C. Responding to diverse learners (i.e., gifted, English learners, struggling readers and writers, and students with learning disabilities)
Included in ALL Categories:

Assessment—statement tying the purpose of assessment to driving instruction

A. Understands how to use data to guide both individual instruction and create flexible groups

B. Knows how to apply informal and formal methods (i.e., formative and summative) for assessing all essential elements of beginning literacy instruction: phonemic awareness, phonics, fluency, vocabulary, comprehension, and writing

C. Knows how to monitor student progress by analyzing and interpreting formative assessment data to inform instruction

D. Is familiar with the decision-making process that leads to the modification or accommodation of assessments based on the needs of diverse learners (i.e., gifted, English learners, struggling readers and writers, and students with learning disabilities)

E. Is familiar with ways to integrate digital tools into the assessment process
2. Familiarize Yourself with Test Questions

*Become comfortable with the types of questions you’ll find on the Praxis tests*

The Praxis assessments include a variety of question types: constructed response (for which you write a response of your own); selected response, for which you select one or more answers from a list of choices or make another kind of selection (e.g., by clicking on a sentence in a text or by clicking on part of a graphic); and numeric entry, for which you enter a numeric value in an answer field. You may be familiar with these question formats from taking other standardized tests. If not, familiarize yourself with them so you don’t spend time during the test figuring out how to answer them.

**Understanding Computer-Delivered Questions**

Questions on computer-delivered tests are interactive in the sense that you answer by selecting an option or entering text on the screen. If you see a format you are not familiar with, read the directions carefully. The directions always give clear instructions on how you are expected to respond.

For most questions, you respond by clicking an oval to select a single answer from a list of answer choices.

However, interactive question types may also ask you to respond by:

- **Clicking more than one oval** to select answers from a list of choices.
- **Typing in an entry box.** When the answer is a number, you may be asked to enter a numerical answer. Some questions may have more than one place to enter a response.
- **Clicking check boxes.** You may be asked to click check boxes instead of an oval when more than one choice within a set of answers can be selected.
- **Clicking parts of a graphic.** In some questions, you will select your answers by clicking on a location (or locations) on a graphic such as a map or chart, as opposed to choosing your answer from a list.
- **Clicking on sentences.** In questions with reading passages, you may be asked to choose your answers by clicking on a sentence (or sentences) within the reading passage.
- **Dragging and dropping answer choices into targets on the screen.** You may be asked to select answers from a list of choices and drag your answers to the appropriate location in a table, paragraph of text or graphic.
- **Selecting answer choices from a drop-down menu.** You may be asked to choose answers by selecting choices from a drop-down menu (e.g., to complete a sentence).

Remember that with every question you will get clear instructions.

Perhaps the best way to understand computer-delivered questions is to view the [Computer-delivered Testing Demonstration](https://www.praxis.org) on the Praxis web site to learn how a computer-delivered test works and see examples of some types of questions you may encounter.
Understanding Selected-Response Questions

Many selected-response questions begin with the phrase “which of the following.” Take a look at this example:

Which of the following is a flavor made from beans?
(A) Strawberry
(B) Cherry
(C) Vanilla
(D) Mint

How would you answer this question?
All of the answer choices are flavors. Your job is to decide which of the flavors is the one made from beans.

Try following these steps to select the correct answer.

1) **Limit your answer to the choices given.** You may know that chocolate and coffee are also flavors made from beans, but they are not listed. Rather than thinking of other possible answers, focus only on the choices given (“which of the following”).

2) **Eliminate incorrect answers.** You may know that strawberry and cherry flavors are made from fruit and that mint flavor is made from a plant. That leaves vanilla as the only possible answer.

3) **Verify your answer.** You can substitute “vanilla” for the phrase “which of the following” and turn the question into this statement: “Vanilla is a flavor made from beans.” This will help you be sure that your answer is correct. If you’re still uncertain, try substituting the other choices to see if they make sense. You may want to use this technique as you answer selected-response questions on the practice tests.

Try a more challenging example
The vanilla bean question is pretty straightforward, but you’ll find that more challenging questions have a similar structure. For example:

Entries in outlines are generally arranged according to which of the following relationships of ideas?
(A) Literal and inferential
(B) Concrete and abstract
(C) Linear and recursive
(D) Main and subordinate

You’ll notice that this example also contains the phrase “which of the following.” This phrase helps you determine that your answer will be a “relationship of ideas” from the choices provided. You are supposed to find the choice that describes how entries, or ideas, in outlines are related.

Sometimes it helps to put the question in your own words. Here, you could paraphrase the question in this way: “How are outlines usually organized?” Since the ideas in outlines usually appear as main ideas and subordinate ideas, the answer is (D).
**QUICK TIP:** Don’t be intimidated by words you may not understand. It might be easy to be thrown by words like “recursive” or “inferential.” Read carefully to understand the question and look for an answer that fits. An outline is something you are probably familiar with and expect to teach to your students. So slow down, and use what you know.

**Watch out for selected-response questions containing “NOT,” “LEAST,” and “EXCEPT”**

This type of question asks you to select the choice that does not fit. You must be very careful because it is easy to forget that you are selecting the negative. This question type is used in situations in which there are several good solutions or ways to approach something, but also a clearly wrong way.

**How to approach questions about graphs, tables, or reading passages**

When answering questions about graphs, tables, or reading passages, provide only the information that the questions ask for. In the case of a map or graph, you might want to read the questions first, and then look at the map or graph. In the case of a long reading passage, you might want to go ahead and read the passage first, noting places you think are important, and then answer the questions. Again, the important thing is to be sure you answer the questions as they refer to the material presented. So read the questions carefully.

**How to approach unfamiliar formats**

New question formats are developed from time to time to find new ways of assessing knowledge. Tests may include audio and video components, such as a movie clip or animation, instead of a map or reading passage. Other tests may allow you to zoom in on details in a graphic or picture.

Tests may also include interactive questions. These questions take advantage of technology to assess knowledge and skills in ways that standard selected-response questions cannot. If you see a format you are not familiar with, read the directions carefully. The directions always give clear instructions on how you are expected to respond.

**QUICK TIP:** Don’t make the questions more difficult than they are. Don’t read for hidden meanings or tricks. There are no trick questions on Praxis tests. They are intended to be serious, straightforward tests of your knowledge.

**Understanding Constructed-Response Questions**

Constructed-response questions require you to demonstrate your knowledge in a subject area by creating your own response to particular topics. Essays and short-answer questions are types of constructed-response questions.

For example, an essay question might present you with a topic and ask you to discuss the extent to which you agree or disagree with the opinion stated. You must support your position with specific reasons and examples from your own experience, observations, or reading.

Take a look at a few sample essay topics:

- “Celebrities have a tremendous influence on the young, and for that reason, they have a responsibility to act as role models.”
- “We are constantly bombarded by advertisements—on television and radio, in newspapers and magazines, on highway signs, and the sides of buses. They have become too pervasive. It’s time to put limits on advertising.”
- “Advances in computer technology have made the classroom unnecessary, since students and teachers are able to communicate with one another from computer terminals at home or at work.”
Keep these things in mind when you respond to a constructed-response question

1) **Answer the question accurately.** Analyze what each part of the question is asking you to do. If the question asks you to describe or discuss, you should provide more than just a list.

2) **Answer the question completely.** If a question asks you to do three distinct things in your response, you should cover all three things for the best score. Otherwise, no matter how well you write, you will not be awarded full credit.

3) **Answer the question that is asked.** Do not change the question or challenge the basis of the question. You will receive no credit or a low score if you answer another question or if you state, for example, that there is no possible answer.

4) **Give a thorough and detailed response.** You must demonstrate that you have a thorough understanding of the subject matter. However, your response should be straightforward and not filled with unnecessary information.

5) **Reread your response.** Check that you have written what you thought you wrote. Be sure not to leave sentences unfinished or omit clarifying information.

**QUICK TIP:** You may find that it helps to take notes on scratch paper so that you don't miss any details. Then you'll be sure to have all the information you need to answer the question.

For tests that have constructed-response questions, more detailed information can be found on page 23.
3. Practice with Sample Test Questions

Answer practice questions and find explanations for correct answers

Computer Delivery

This test is available via computer delivery. The following sample question provides a preview of an actual screen used in a computer-delivered test. For the purposes of this Study Companion, the sample questions are shown as they would appear in a paper-delivered test.

During a writing activity a teacher writes two sentences from a sample of a student’s writing on the whiteboard. The teacher shows the students how to use appropriate proofreading marks and asks the students to proofread the first paragraph of their individual writing samples.

Which of the following traits is the teacher’s focus?

- Ideas
- Voice
- Conventions
- Organization

Answer the question above by clicking on the correct response.
The sample questions that follow illustrate the kinds of questions on the test. They are not, however, representative of the entire scope of the test in either content or difficulty. Answers with explanations follow the questions.

Directions: Each of the questions or statements below is followed by suggested answers or completions. Select the one that is best in each case.

1. A sixth-grade teacher selects several domain-specific vocabulary words from a textbook before starting a new chapter. In planning an instructional strategy, the teacher chooses the new vocabulary words because they are essential to understanding the new topic. An instructional technique that requires students to gain the deepest level of vocabulary knowledge is the most appropriate instructional technique for the teacher to select.

Based on the teacher’s goal, which of the following research-based techniques is best for the teacher to include in the instructional plan?

(A) Having students create original sentences using the words and apply word meanings across contexts
(B) Creating activities in which students categorize words and generate multiple meanings for each word
(C) Presenting new vocabulary in an authentic context by asking students to use the words to complete framed sentences
(D) Telling students to associate an unfamiliar word with a definition and a synonym or an antonym

2. A third-grade teacher has completed a running record and a spelling inventory for each member of the class. One student misread the words “big,” “chat,” and “pen” during the running record. On the spelling inventory, the student was able to successfully complete all beginning and ending consonants in CVC pattern words. Which of the following is the best instructional focus for the student?

(A) Digraphs
(B) Short vowels
(C) Word-attack skills
(D) Long vowels

3. A second-grade teacher is reading the text *Click, Clack, Moo: Cows That Type* by Doreen Cronin to the class. The teacher reads the sentence, “The cows were growing impatient with the farmer.” The teacher stops reading after this sentence and says to the class, “Hmm… I wonder what the word ‘impatient’ means? I know that the farmer just got another note from the cows that said they won’t give any milk. I bet that makes the farmer really mad! I’m going to keep reading to see whether I can figure out what impatient means.” The teacher is using which of the following?

(A) A miscue analysis
(B) A semantic-feature analysis
(C) A think-aloud strategy
(D) A running record

4. Place the reading strategies in the list in order according to when the strategy is used: before, during, or after reading. Click and drag each strategy to the appropriately labeled box.

   Summarizing
   Self-monitoring
   Setting a purpose

1. Before reading 
2. During reading 
3. After reading
5. Which of the following is the best way for a teacher to assess students’ phonological awareness?
(A) Saying the word “lamp” and asking students to come up with rhyming words
(B) Asking students to identify the letter at the beginning of the word “desk”
(C) Distributing the letter cards “b,” “a,” and “t” and asking students to order the letters to create a word
(D) Displaying the written word “cat” and asking students to sound it out as they tap each letter

A sixth-grade teacher engages students in an activity that integrates reading and writing in a social studies unit of study. In the note-taking format shown, students take notes on the right side of the organizer as they read part of a chapter in the textbook. When the reading is complete, the students summarize the main ideas and read the notes they have recorded to develop questions that the notes would answer.

<table>
<thead>
<tr>
<th>Questions Answered by the Notes</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

7. Which of the following text-dependent questions best focuses students to think about the craft and structure of a text?
(A) What did the main character do when he saw the letter? Why?
(B) Have you ever read another story like this? How are they similar?
(C) How has Ma and Karin’s relationship changed over the course of the story? What changed it?
(D) How did the author describe Bradley’s uncle? Why did the author choose to describe him that way?

8. A dialogue between a teacher and a student follows.

**Teacher:** What is a nocturnal animal?
**Student:** An animal that stays awake at night.

Which of the following probing questions best ensures that the student understands the vocabulary with no misconceptions?
(A) Can you give me an example of a nocturnal animal?
(B) Does a nocturnal animal have any special characteristics?
(C) What is a diurnal animal?
(D) Where do nocturnal animals live?
9. A fourth-grade teacher presents the word “mobile” to students when discussing cell phones and states that sometimes a cell phone is called a “mobile phone.” The teacher then presents the class with the words “automobile” and “mobilize” and asks them to explain, based on their knowledge of these two words, why it makes sense to refer to a cell phone as a “mobile phone.” The teacher is focusing instruction on which of the following?

(A) Context clues
(B) Letter-sound correspondence
(C) Morphology
(D) Syntactic knowledge

10. Which of the following actions best reflects an understanding of the research on teaching the alphabetic principle to young students?

(A) Teaching students the letters and their corresponding sounds in alphabetical order
(B) Introducing students to similar-sounding or similar-looking letters in close succession
(C) Introducing students to the long vowel sounds before introducing them to the short vowel sounds
(D) Teaching students continuous vowel and consonant sounds before teaching stops, or clipped sounds

11. A fourth-grade teacher works with a group of English learners (ELs) on academic vocabulary words. The students discuss the words “house,” “bill,” and “state,” which appear in a social studies text. Before the students read the text, the teacher asks them to write down the definition they already know for each word. Which of the following strategies will best help the students determine the meaning of the vocabulary words while reading?

(A) Underlining the vocabulary words as they read and using the text around the words to figure out the alternate definitions
(B) Looking up the vocabulary words in a dictionary and writing down the definitions on a piece of paper to refer to while reading
(C) Locating synonyms for the vocabulary words in a thesaurus and replacing them in the text with similar terms
(D) Examining the part of speech for each vocabulary word and using it to help determine its meaning in context

12. A class prepares to read a science text about an unfamiliar, complex process. The best way the teacher can support students’ successful reading of the text is to

(A) guide students to continue reading when they come to an unfamiliar word in order to search for context clues
(B) assign a small portion of text, and then pause for discussion and student questions before moving on
(C) make dictionaries available to students so that they can look up the meanings of challenging vocabulary words before reading each section of the text
(D) ask students to do a quick write-up about the process using their background knowledge, and then ask them to share their writing with a partner
13. A student demonstrates mastery in spelling the CVC and CVCe pattern words. The next spelling word pattern that will be focused on during explicit instruction are vowel digraphs. Which of the following instructional activities best supports directed instruction of vowel digraphs?
   (A) Picture sorts  
   (B) Elkonin boxes  
   (C) Open-word sorts  
   (D) Closed-word sorts

14. After reading a short story with the class, a teacher asks students to write about two ways that Coyote is clever. A student, Devon, responds as follows.

   The first way he is clever is that he can Shot bowinerows The Next way he clever is that He noes how to get to the moon

Which of the following best describes Devin's writing skill?
   (A) Devin uses evidence from the text and knows that each syllable of a word contains a vowel sound.  
   (B) Devin spells most high-frequency words correctly and inserts spaces between individual words.  
   (C) Devin understands one-to-one letter-sound correspondence and knows how to apply capitalization and punctuation rules.  
   (D) Devin shows an understanding of story structure and knows how an author uses details to portray characters.

15. Which of the following is most appropriate for a teacher to use when organizing flexible groups for reading instruction?
   (A) Current standardized reading assessment results when developing long-range goals  
   (B) Results from a variety of assessments when forming balanced mixed-ability groups  
   (C) Formal and informal measures when targeting students' short-term common needs  
   (D) A teacher-prepared survey when determining students' authentic reading interests

16. Example #1
   a. Dylan ate lunch at Joe’s Pizzeria.  
   b. Joe’s Pizzeria is Dylan’s favorite restaurant to go to on weekends.

   Dylan ate lunch at Joe’s Pizzeria, his favorite restaurant to go to on weekends.

Example #2
   a. Ms. Tyler is Sally’s favorite teacher.
   b. Ms. Tyler is kind and always fair to everyone in the class.

   Ms. Tyler, Sally’s favorite teacher, is kind and always fair to everyone in the class.

   A teacher engages students in a discussion of how the two sentences in each of the preceding examples are combined into one sentence. The teacher’s goal can best be identified as providing instruction in which of the following rules of grammar?
   (A) Complete sentences contain a subject, a verb, and a stand-alone idea.  
   (B) Appositives are modifying nouns or phrases that eliminate wordiness and redundancy.  
   (C) Dangling modifiers can be avoided by writing in the active rather than the passive voice.  
   (D) Parallelism means that phrases in the same sentence have the same grammatical structure.
17. A teacher sets up an intervention lesson using a three-pocket chart holder for a student struggling with spelling. The teacher chooses the word “fog” because it appears in a picture book that is familiar to the student. The teacher then places an alphabet card representing individual letters of the word in each pocket and flips the cards over so the letters do not show. The teacher then asks the student to find the correct sound-letter placement of the word by pronouncing a sound and asking questions such as “Where is the /g/ in fog?”

The activity primarily targets the student’s understanding of which of the following?

(A) High-frequency sight words
(B) Short vowel sounds
(C) Initial consonant sounds
(D) Phoneme segmentation

18. As students read a complex piece of text, a teacher asks them to record their reactions in the margin, including their questions, summaries, and personal connections. The primary purpose of the activity is to ensure that students

(A) develop strong sequencing skills
(B) apply word-analysis strategies effectively
(C) identify the organizational structure of the text
(D) think strategically about what and why they are reading

19. During a reading conference, a teacher notices that a student is unable to answer basic comprehension questions about a book after reading it. Which of the following actions is best for the teacher to take first?

(A) Preparing an outline of the plot to assist the student in recalling important details
(B) Encouraging the student to reread the parts of the book that were difficult to understand
(C) Conducting a mini-lesson on active reading strategies the student can use while reading
(D) Administering an informal assessment to identify the skills with which the student is struggling

20. A student spells the following words correctly: “chat,” “fish,” “shape,” and “church.” Which of the following spelling patterns has the student mastered?

(A) Digraphs
(B) Blends
(C) Short vowels
(D) Long vowels

21. Which of the following instructional strategies best completes the chart?

<table>

</tr>
</tbody>
</table>

(A) Semantic feature analysis
(B) Brainstorming
(C) Readers’ theater
(D) Anticipation guide

22. During a lesson on how to conduct online research, a teacher introduces guidelines to students about how to determine whether information is credible. Which of the following statements describes the most important guiding principle of assessing the reliability of sources?

(A) Using only primary sources for research
(B) Evaluating sources based on their authority, relevance, and accuracy
(C) Examining the information to ensure it is thorough enough for the topic
(D) Incorporating resources that are blogs or wikis, no matter the type of research
23. A first-grade teacher engages students in phonemic awareness activities. Students have worked on segmenting and blending words and are now working on phoneme deletion. Which of the following activities best incorporates the target concept?

(A) Asking students to guess which classmate’s name will be said by enunciating the first phoneme only and repeating several times

(B) Directing students to look at picture cards and telling them to identify one word in a series of four containing a different vowel sound

(C) Presenting students with a colored tile that represents one phoneme and adding a different colored tile representing a new sound

(D) Showing students a word made of three different colored tiles containing three phonemes and removing one colored tile to create a new word
Step 3: Practice with Sample Test Questions

Answers to Sample Questions

1. The correct answer is (A). When students create their own sentences using domain-specific vocabulary and then apply the word meanings in multiple contexts, they have achieved the deepest level of understanding a word. Choice (B) is incorrect because categorizing words and generating multiple meanings for them requires comprehension of the domain-specific words but not at the deepest level of understanding. Choice (C) is incorrect because having students use domain-specific words to fill in the blanks in framed sentences requires only a minimum level of knowledge. Choice (D) is incorrect because associating an unfamiliar word with a definition and a synonym or an antonym requires only a minimum level of knowledge.

2. The correct answer is (B). The student misread three short-vowel words during the running record and was able to correctly identify beginning and ending consonants in CVC pattern words. Choice (A) is incorrect because there is only one word from the running record that contains a digraph; therefore, a pattern has not developed with this word feature. Choice (C) is incorrect because while it is known that this student is not able to read the three CVC pattern words, it is not known if the student tried to sound them out. It is known from the spelling inventory that the student does understand beginning and ending consonants. Choice (D) is incorrect because there was no information given about long vowels from these two assessments.

3. The correct answer is (C). The teacher is using a think-aloud strategy to talk through how to figure out unfamiliar words in connected text. Choice (A) is incorrect because a miscue analysis is completed by the teacher when a student reads a passage for an informal reading inventory. Choice (B) is incorrect because a semantic-feature analysis is a type of graphic organizer and is used to support comprehension of text. Choice (D) is incorrect because a running record is something that a teacher gives a student while he or she is reading.

4. The correct answers are (3), (2), and (1). 1. Before Reading: (3) Setting a purpose for reading is a before-reading strategy. 2. During Reading: (2) Self-monitoring is a strategy that is used while reading. 3. After Reading: (1) Summarizing is a strategy that occurs after reading has taken place.

5. The correct answer is (A). Phonological awareness refers to the recognition that words are comprised of sound units, or phonemes, and can be broken down into syllables. Choices (B), (C), and (D) are incorrect because a phonemic awareness assessment focuses on identification of the skills of phoneme matching, isolation, blending, and segmentation.

6. The correct answer is (C). The activity described is known as the Cornell note-taking system, which is a system for taking, organizing, and reviewing notes. The activity asks students to take notes on important information in a text, develop questions that may be asked related to the notes, and then write a summary of the content. The teacher’s primary goal in engaging students in the activity that integrates reading and writing is to help students develop critical-thinking skills and engage in the processing of key ideas and concepts. Choice (A) is incorrect because the scenario does not indicate that the teacher is providing direct instruction in the conventions of formal academic writing. Choice (B) is incorrect because although students are most likely encouraged to paraphrase information they read when writing key ideas, the scenario does not indicate that the teacher plans to use the experience of integrating reading and writing as a springboard for future writing projects. Choice (D) is incorrect because although the activity is effective in initiating oral discussion about content among peers, it is incorrect to indicate that the students are discussing the author’s purpose.

7. The correct answer is (D). Asking about the author’s word choices encourages students to think about the author’s intentions and about how the author’s word choices affect the reading experience. Choices (A), (B), and (C) are incorrect because these text-dependent questions are intended to focus the reader on gaining greater understanding of the text or making judgments about the text.

8. The correct answer is (B). Asking about special characteristics will uncover any misconceptions in understanding the term “nocturnal.” The characteristics the students give will lead the teacher into further clarification or allow him or her to move on to other vocabulary. Choice (A) is incorrect because asking for examples will not clear up misconceptions. Choice (C) is incorrect because asking what a diurnal animal is does not clarify misconceptions about the term “nocturnal.” Choice (D) is incorrect because asking where nocturnal animals live will not help the teacher determine whether the student understands the term “nocturnal.” The student could provide most settings where nocturnal animals can live with very little understanding of the term.

9. The correct answer is (C). The teacher is having students deduce the meaning of the word “mobile” using morphology. Morphology uses roots and the knowledge of two words that contain the root “mobile.” Choice (A) is incorrect because context clues are clues...
to the meaning of a word contained in text that surrounds it. Choice (B) is incorrect because the teacher is not focusing on letter-sound correspondence. Choice (D) is incorrect because syntactic knowledge focuses on the order of the words in a sentence.

10. The correct answer is (D). Continuous vowel or consonant sounds can be prolonged or stretched out when they are pronounced and are easier to say without distortion. Voiced stop sounds are not as easy to pronounce in isolation without a vowel sound. Choice (A) is incorrect because introducing letter sounds in alphabetical order limits the number of words the students can form, thus limiting their ability to practice using the alphabetic principle to read and write. Research generally agrees that the earliest relationships introduced should be those that enable students to begin reading words as soon as possible. That is, the relationships chosen should have high utility. Choice (B) is incorrect because the simultaneous introduction of auditorily or visually similar sounds and letters should be avoided. Choice (C) is incorrect because research does not support the effectiveness of introducing students to all long vowel sounds before short vowels.

11. The correct answer is (A). By first brainstorming the familiar definitions of the words and then using the context of the piece of academic writing to learn another definition for each word, students are assimilating the idea that many words in English have more than one meaning. If they are reading and a word doesn't quite make sense as they know it, they need to seek out alternate definitions to help the text make sense, and using context clues is an excellent strategy for this purpose. Choice (B) is incorrect because while looking up the words in a dictionary may help the students, it is not the most efficient method. Furthermore, many of the given words have multiple definitions, beyond even what the assignment requires, and that is confusing for many students, especially English learners (ELs). Using context clues is a more valuable life skill as students will not always have a dictionary at their disposal. Choice (C) is incorrect because similar to choice (B), looking up the words in a thesaurus to replace them with synonyms is not an efficient use of time or reading strategies. Furthermore, when used in a social studies context, the words listed have a specific application and students need to learn them in the social studies context as they are. Choice (D) is incorrect because while a word’s part of speech can sometimes add to the context clues, the words given in the example remain the same part of speech for the familiar version and its social studies application, so it is not the best strategy to use for this purpose.

12. The correct answer is (B). By assigning the class a small section of a complex science text and pausing for discussion, the teacher will allow students to monitor their own comprehension and employ fix-up strategies to clarify any misunderstandings. Choices (A) and (C) are incorrect because weaknesses in word-level processes hinder comprehension, but neither of these choices is the best answer. Choice (D) is incorrect because doing a write-up activating prior knowledge about the science process is more likely to be a prereading activity and is not the most effective strategy to support students while reading the text.

13. The correct answer is (D). Closed-word sorts are teacher-directed word-sorting activities that support students’ word-pattern learning. The teacher-provided words introduce students to the spelling pattern that is being focused on during the unit. Choice (A) is incorrect because picture sorts focus on phonemic-awareness skills. Choice (B) is incorrect because use of Elkonin boxes is a phonemic-awareness activity. Choice (C) is incorrect because an open-word sort is not a teacher-directed activity.

14. The correct answer is (A). The writing sample shows the student draws on the text for evidence of Coyote’s cleverness, and an examination of the sample supports the claim that the student understands that each syllable in a word needs to contain at least one vowel. Choice (B) is incorrect because the sample contains several spelling errors, and individual words are not consistently separated by spaces. Choice (C) is incorrect because the sample does not adhere to basic capitalization or punctuation rules. Choice (D) is incorrect because the sample does not address story structure; it provides details about Coyote.

15. The correct answer is (C). Flexible grouping is a form of differentiated instruction in which a teacher uses a combination of formal and informal assessments and observations to meet the short-term needs of individual students. Based on data, small groups of students are formed, and the teacher provides systematic and explicit instruction in identified skill areas. How long and how often the teacher meets with a group depends on common student needs. Choice (A) is incorrect because current standardized reading assessment results are only one measure to consider when forming flexible groups, which is not a long-range strategy. Choice (B) is incorrect because in flexible grouping, the teacher forms groups based on similar instructional needs. Choice (D) is incorrect because flexible grouping is used to meet individual students’ current needs in specific skill areas. The model does not address reading interests.
16. The correct answer is (B). In the combined sentence in each example, an appositive is used as a modifier, thereby reducing the repetition and wordiness of the two short sentences. Choice (A) is incorrect because all sentences in the examples are complete sentences. Choice (C) is incorrect because no sentence in the examples contains a dangling or misplaced modifier. Choice (D) is incorrect because the sentences in the examples do not present any problem with parallel construction.

17. The correct answer is (D). The activity focuses on phoneme segmentation, an aspect of phonemic awareness. Phonemic segmentation requires students to determine the position of sounds in words. Choice (A) is incorrect because the activity focuses more on the identification of sounds than it does on the retention of vocabulary. Choices (B) and (C) are incorrect because the activity focuses on all sounds in the word and not just short vowel sounds or initial consonant sounds.

18. The correct answer is (D). Good readers are extremely active as they read. When students reading a complex piece of text respond in writing by asking questions, summarizing, and making personal connections, they are thinking strategically about what and why they are reading. Through annotation, students create a visual record of their thoughts while making sense of the text. Choices (B), (C), and (D) are incorrect because sequencing, applying word-analysis strategies, and identifying text organization are necessary but not sufficient by themselves to reach a deep level of engagement and comprehension of complex text.

19. The correct answer is (D). Administering an informal assessment to identify the skills with which the student is struggling is the best first step to help the teacher provide guided instruction in the area the student needs most. All of the other choices are strategies to use after performing an informal assessment to find the skill level of the student.

20. The correct answer is (A). Each of the words contains a digraph either at the beginning or end of the word. Choice (B) is incorrect because none of these words contain a blend. Blends and digraphs are commonly confused. Choice (C) is incorrect because the word “church” contains an r-controlled vowel, not a short vowel. Choice (D) is incorrect because only one word contains a long vowel: the word “shape.”

21. The correct answer is (C). Facilitating a readers’ theater is an effective strategy for improving fluency skills. Choice (A) is incorrect because semantic feature analysis is used to work on vocabulary skills, not fluency. Choice (B) is incorrect because brainstorming is used to help students struggling with writing content. Choice (D) is incorrect because an anticipation guide is used to strengthen comprehension.

22. The correct answer is (B). Students must determine who created the Web site and whether it gives them useful and accurate information before they can use the source as an effective means of research. Choice (A) is incorrect because primary sources are not the only sources that can be used for effective research. Choice (C) is incorrect because, even if the source is not completely thorough on the topic, students can use it as a source of information. They can look to other sources for further in-depth information on their topic. Choice (D) is incorrect because blogs and wikis cannot be used, depending on the kind of information needed. Blogs and wikis are not always reliable but shouldn’t be eliminated in the search for information.

23. The correct answer is (D). Looking at a series of three colored tiles and removing one of them forms a new word using the skill of deletion. Choice (A) is incorrect because enunciating the initial phoneme of a student’s name, repeating it several times, and asking students to guess whose name will be said is a phoneme-isolation activity. Choice (B) is incorrect because the ability to look at a set of picture cards and name which one contains a different vowel sound is a phonemic categorization activity instead of a phoneme-deletion activity. Choice (C) is incorrect because using different colored tiles with different sounds assigned to them to form words is a blending activity.
About the Constructed-Response Questions

The Teaching Reading test consists of three constructed-response questions that require the candidate to demonstrate the ability to apply knowledge and theory of reading to specific students’ needs and classroom scenarios.

Each task will be scored on a 0–3 scale using the following general scoring guide:

General Scoring Guide for Constructed-Response Questions

Score of 3

The response demonstrates a thorough understanding of the elements of reading and reading instruction relevant to the question.

A response in this category

- Clearly and specifically answers all parts of the question in a way that directly addresses the instructional situation described.
- Shows strong knowledge of concepts, theories, facts, procedures, or methodologies relevant to the question. Any errors of fact or terminology are minor and do not detract from the understanding shown.
- Provides a strong explanation that is well supported by relevant evidence.

Score of 2

The response demonstrates a basic or general understanding of the elements of reading and reading instruction relevant to the question.

A response in this category

- Adequately answers most or all parts of the question in a way that is appropriate for the instructional situation described.
- Shows basic or general knowledge of concepts, theories, facts, procedures, or methodologies relevant to the question. Any errors do not detract from the general understanding shown.
- Provides a basic explanation that is adequately supported by relevant evidence.

Score of 1

The response demonstrates a weak or limited understanding of the elements of reading and reading instruction relevant to the question.

A response in this category

- Answers some part (or parts) of the question at a basic level.
- Has one or more of the following weaknesses:
  - Fails to answer most parts of the question and/or fails to address crucial aspects of the instructional situation described.
  - Shows weak or limited knowledge of concepts, theories, facts, procedures, or methodologies relevant to the question. The weakness may be indicated by errors or misconceptions.
  - Provides no explanation or an explanation that is weak and inadequately supported by evidence.

Score of 0

The response demonstrates no understanding of the elements of reading and reading instruction relevant to the question.

A response in this category

- Fails to respond appropriately to any part of the question.
- Shows no knowledge of concepts, theories, facts, procedures, or methodologies relevant to the question; or any information presented about reading and reading instruction is seriously in error.

Note: The mere presence of reading-specific words or phrases that might be used in an adequate response does not by itself indicate knowledge.

Also receiving a score of 0 would be responses that are blank, completely off-topic, or not written in English.
A second grouping structure that Mr. Jimenez can use to meet the needs of diverse students in his classroom is through implementing a jigsaw model. In this grouping practice for example, Mr. Jimenez can select a current scientific article with a readability level slightly higher than students’ reading level, break the information into sections, and ask each of the six students with proficient reading skills in the group to learn a section and then teach the information to other group members. This grouping strategy allows each group member to be challenged, become an “expert” in certain areas, assume responsibility for teaching others, and improve the listening and communication skills of all group members.

Task 2: To differentiate instruction by supporting the ten students who are having difficulty decoding and understanding content-specific words, Mr. Jimenez can make a list of Tier 3 words in a text students are expected to read before instruction in the material begins. He can use the Frayer Model as a technique to develop students’ understanding of the difficult words. The Frayer Model is a graphic organizer with four sections that requires a student to write a definition for each word, its characteristics, and examples and nonexamples of how the word is used in context. This preteaching strategy is likely to be very helpful to students’ comprehension when they see the difficult vocabulary in sustained reading activities.

A second way to differentiate instruction for students who need support in comprehending science-based materials is for Mr. Jimenez to use an anticipation guide as a prereading activity. An anticipation guide is a series of questions (statements) related to a text that ask students to either agree or disagree with each idea based on their prior knowledge of the topic. As students read a text, they return to the anticipation guide to either confirm or change their original evaluation of the statement. The purpose of engaging students in this activity is to focus their attention on what they think they already know about a particular topic and then remain focused on the information as they read and determine the extent to which they can verify or change their ideas as they learn new content.

Commentary on a Response with a Score of 3

This sample received a score of 3 because every part of both tasks is clearly and specifically addressed. In task 1, the test taker identifies and thoroughly describes two grouping practices intended to meet the needs of a diverse student population: forming heterogeneous groups and grouping students through the use of a
jigsaw model. The benefits of each grouping structure is also appropriately and clearly identified in the response. In task 2, the test taker identifies and clearly describes two strategies and the purposes of each that Mr. Jimenez can use to differentiate instruction: using the Frayer Model to provide explicit instruction in content-based vocabulary and using an anticipation guide as a way to support students with comprehension difficulties when engaged in reading curriculum-based materials in science. This response demonstrates a thorough understanding of the elements of reading and reading instruction.

Sample Response that Received a Score of 2

Mr. Jimenez teaches a class with a wide range of student strengths and weaknesses.

One strategy he can use to group students for instruction is to implement peer tutoring groups. In this technique, the teacher can assign a student with problems comprehending scientific concepts with a higher-performing student. Together the pair can work together to successfully complete an assigned task. This strategy gives extra support and guidance to the lower-performing student in learning difficult content, and it helps the higher-performing student in reinforcing his or her learning and assuming responsibility for aiding a peer.

Mr. Jimenez can also use flexible grouping to meet his students’ specific learning needs. Based on current classroom assessments, he can organize students into small groups on a temporary basis.

There are many techniques Mr. Jimenez can use in the classroom to differentiate instruction that will most appropriately meet students’ needs. For example, one strategy could be to form small groups based on student interest in a particular aspect of science instruction. This technique would be very motivating to students and increase their engagement in reading science materials.

Also, Mr. Jimenez can use the concept of curriculum compacting to meet the needs of several of his more capable students.

Commentary on a Response with a Score of 2

This sample received a score of 2 because most parts of the question are addressed but at a general level. In task 1, the test taker identifies two ways Mr. Jimenez can group students for instruction based on their specific needs: peer tutoring groups and flexible grouping. The sample provides a description of each technique but does not provide an explanation of the benefit of flexible grouping. In task 2, the test taker gives two differentiated-instruction strategies: forming groups based on individual student interest and using curriculum compacting as ways to provide instruction. The test taker does not provide a clear description or the purpose of the concept of curriculum compacting. This response demonstrates a general understanding of the elements of reading and reading instruction relevant to the question.

Sample Response that Received a Score of 1

Mr. Jimenez has many students who are reading at different levels. He should teach skills students need to read science materials to the whole class. Mr. Jimenez should talk to other teachers in his school to get new ideas about how to teach students who don’t have the same reading skills.

Mr. Jimenez can write different lesson plans to meet the needs of different students. Some may need help with decoding words and others may have trouble comprehending what they read since science has many ideas that a lot of students don’t have knowledge of at the beginning of a lesson.

Commentary on a Response with a Score of 1

This response received a score of 1 because some parts of the question were answered at a weak or limited level. The response does not address any part of task 1, i.e. that is, two ways of grouping students to meet their specific needs in reading science-based information. Task 2 is partially addressed. The test taker identifies the need for the teacher to develop different lesson plans based on specific student needs, e.g. for example, word recognition and comprehension. This response demonstrates a weak or limited understanding of the elements of reading and reading instruction relevant to the question.
4. Determine Your Strategy for Success

Set clear goals and deadlines so your test preparation is focused and efficient

Effective Praxis test preparation doesn’t just happen. You’ll want to set clear goals and deadlines for yourself along the way. Otherwise, you may not feel ready and confident on test day.

1) Learn what the test covers.

You may have heard that there are several different versions of the same test. It’s true. You may take one version of the test and your friend may take a different version a few months later. Each test has different questions covering the same subject area, but both versions of the test measure the same skills and content knowledge.

You’ll find specific information on the test you’re taking on page 5, which outlines the content categories that the test measures and what percentage of the test covers each topic. Visit www.ets.org/praxis/testprep for information on other Praxis tests.

2) Assess how well you know the content.

Research shows that test takers tend to overestimate their preparedness—this is why some test takers assume they did well and then find out they did not pass.

The Praxis tests are demanding enough to require serious review of likely content, and the longer you’ve been away from the content, the more preparation you will most likely need. If it has been longer than a few months since you’ve studied your content area, make a concerted effort to prepare.

3) Collect study materials.

Gathering and organizing your materials for review are critical steps in preparing for the Praxis tests. Consider the following reference sources as you plan your study:

• Did you take a course in which the content area was covered? If yes, do you still have your books or your notes?
• Does your local library have a high school-level textbook in this area? Does your college library have a good introductory college-level textbook in this area?

Practice materials are available for purchase for many Praxis tests at www.ets.org/praxis/testprep. Test preparation materials include sample questions and answers with explanations.

4) Plan and organize your time.

You can begin to plan and organize your time while you are still collecting materials. Allow yourself plenty of review time to avoid cramming new material at the end. Here are a few tips:

• Choose a test date far enough in the future to leave you plenty of preparation time. Test dates can be found at www.ets.org/praxis/register/dates_centers.
• Work backward from that date to figure out how much time you will need for review.
• Set a realistic schedule—and stick to it.
5) **Practice explaining the key concepts.**

*Praxis* tests with constructed-response questions assess your ability to explain material effectively. As a teacher, you'll need to be able to explain concepts and processes to students in a clear, understandable way. What are the major concepts you will be required to teach? Can you explain them in your own words accurately, completely, and clearly? Practice explaining these concepts to test your ability to effectively explain what you know.

6) **Understand how questions will be scored.**

Scoring information can be found on page 42.

7) **Develop a study plan.**

A study plan provides a road map to prepare for the *Praxis* tests. It can help you understand what skills and knowledge are covered on the test and where to focus your attention. Use the study plan template on page 31 to organize your efforts.

And most important—get started!

**Would a Study Group Work for You?**

**Using this guide as part of a study group**

People who have a lot of studying to do sometimes find it helpful to form a study group with others who are working toward the same goal. Study groups give members opportunities to ask questions and get detailed answers. In a group, some members usually have a better understanding of certain topics, while others in the group may be better at other topics. As members take turns explaining concepts to one another, everyone builds self-confidence.

If the group encounters a question that none of the members can answer well, the group can go to a teacher or other expert and get answers efficiently. Because study groups schedule regular meetings, members study in a more disciplined fashion. They also gain emotional support. The group should be large enough so that multiple people can contribute different kinds of knowledge, but small enough so that it stays focused. Often, three to six members is a good size.

Here are some ways to use this guide as part of a study group:

- **Plan the group’s study program.** Parts of the study plan template, beginning on page 31, can help to structure your group's study program. By filling out the first five columns and sharing the worksheets, everyone will learn more about your group’s mix of abilities and about the resources, such as textbooks, that members can share with the group. In the sixth column (“Dates I will study the content”), you can create an overall schedule for your group’s study program.

- **Plan individual group sessions.** At the end of each session, the group should decide what specific topics will be covered at the next meeting and who will present each topic. Use the topic headings and subheadings in the Test at a Glance table on page 5 to select topics, and then select practice questions, beginning on page 13.

- **Prepare your presentation for the group.** When it’s your turn to present, prepare something that is more than a lecture. Write two or three original questions to pose to the group. Practicing writing actual questions can help you better understand the topics covered on the test as well as the types of questions you will encounter on the test. It will also give other members of the group extra practice at answering questions.
• **Take a practice test together.** The idea of a practice test is to simulate an actual administration of the test, so scheduling a test session with the group will add to the realism and may also help boost everyone’s confidence. Remember, complete the practice test using only the time that will be allotted for that test on your administration day.

• **Learn from the results of the practice test.** Review the results of the practice test, including the number of questions answered correctly in each content category. For tests that contain constructed-response questions, look at the Sample Test Questions section, which also contain sample responses to those questions and shows how they were scored. Then try to follow the same guidelines that the test scorers use.

• **Be as critical as you can.** You’re not doing your study partner(s) any favors by letting them get away with an answer that does not cover all parts of the question adequately.

• **Be specific.** Write comments that are as detailed as the comments about the sample responses. Indicate where and how your study partner(s) are doing an inadequate job of answering the question. Writing notes in the margins of the answer sheet may also help.

• **Be supportive.** Include comments that point out what your study partner(s) got right.

Then plan one or more study sessions based on aspects of the questions on which group members performed poorly. For example, each group member might be responsible for rewriting one paragraph of a response in which someone else did an inadequate job.

Whether you decide to study alone or with a group, remember that the best way to prepare is to have an organized plan. The plan should set goals based on specific topics and skills that you need to learn, and it should commit you to a realistic set of deadlines for meeting those goals. Then you need to discipline yourself to stick with your plan and accomplish your goals on schedule.
**5. Develop Your Study Plan**

*Develop a personalized study plan and schedule*

Planning your study time is important because it will help ensure that you review all content areas covered on the test. Use the sample study plan below as a guide. It shows a plan for the *Core Academic Skills for Educators: Reading* test. Following that is a study plan template that you can fill out to create your own plan. Use the “Learn about Your Test” and “Test Specifications” information beginning on page 5 to help complete it.

**Use this worksheet to:**
1. Define Content Areas: List the most important content areas for your test as defined in chapter 1.
2. Determine Strengths and Weaknesses: Identify your strengths and weaknesses in each content area.
3. Identify Resources: Identify the books, courses, and other resources you plan to use for each content area.
4. Study: Create and commit to a schedule that provides for regular study periods.

</table>
### My Study Plan

Use this worksheet to:

1. **Define Content Areas:** List the most important content areas for your test as defined in chapter 1.
2. **Determine Strengths and Weaknesses:** Identify your strengths and weaknesses in each content area.
3. **Identify Resources:** Identify the books, courses, and other resources you plan to use for each content area.
4. **Study:** Create and commit to a schedule that provides for regular study periods.

6. Review Study Topics

*Detailed study topics with questions for discussion*

**Using the Study Topics That Follow**

The Teaching Reading: Elementary test is designed to measure the knowledge and skills necessary for a beginning teacher.

This chapter is intended to help you organize your preparation for the test and to give you a clear indication of the depth and breadth of the knowledge required for success on the test.

Virtually all accredited programs address the topics covered by the test; however, you are not expected to be an expert on all aspects of the topics that follow.

You are likely to find that the topics below are covered by most introductory textbooks. Consult materials and resources, including lecture and laboratory notes, from all your coursework. You should be able to match up specific topics and subtopics with what you have covered in your courses.

Try not to be overwhelmed by the volume and scope of content knowledge in this guide. Although a specific term may not seem familiar as you see it here, you might find you can understand it when applied to a real-life situation. Many of the items on the actual test will provide you with a context to apply to these topics or terms.

**Discussion Areas**

Interspersed throughout the study topics are discussion areas, presented as open-ended questions or statements. These discussion areas are intended to help test your knowledge of fundamental concepts and your ability to apply those concepts to situations in the classroom or the real world. Most of the areas require you to combine several pieces of knowledge to formulate an integrated understanding and response. If you spend time on these areas, you will gain increased understanding and facility with the subject matter covered on the test. You may want to discuss these areas and your answers with a teacher or mentor.

Note that this study companion does not provide answers for the discussion area questions, but thinking about the answers will help improve your understanding of fundamental concepts and may help you answer a broad range of questions on the test.
Study Topics

An overview of the areas covered on the test, along with their subareas, follows.

I. Phonological and Phonemic Awareness including Emergent Literacy

A. Understands instructional methods for teaching phonological awareness (recognition of rhyme and alliteration; segmenting, blending, manipulation of syllables as well as onset and rime)

B. Understands instructional methods for teaching phonemic awareness, both basic (e.g., segmenting and blending) and advanced (e.g., deletion, substitution)

C. Knows ways to develop students’ expressive and receptive language skills

D. Knows instructional methods to teach beginning readers the concepts about print such as directionality, return sweep, parts of a book, and the form and function of print

E. Understands instructional strategies to help emergent readers fluently identify upper- and lowercase letters in various fonts

Discussion areas: Phonological and Phonemic Awareness including Emergent Literacy

• What are ways that teachers can model the rules of Standard English while respecting regional and dialectical variations?

• What are some instructional strategies for teaching letter recognition?

• How can students’ print awareness be assessed?

• At which age ranges should the various phonological skills be acquired?

• What does the term “phonemic awareness” mean?

• How is phonemic awareness related to phonological awareness?

II. Phonics and Decoding

A. Understands how to teach phoneme-grapheme correspondence

B. Understands methods for teaching phonics systematically, explicitly, and recursively

C. Knows instructional methods for teaching common phonics patterns and rules (consonant digraphs, blends, diphthongs, schwa sound, syllable types, word families, etc.)

D. Knows how to teach morphological analysis (i.e., affixes, roots, and base words)

E. Knows how to teach syllable types in decoding multisyllabic words

F. Is familiar with multisensory approaches for supporting student recognition of nondecodable/irregularly spelled words (i.e., was, listen, though, the, once)

Discussion areas: Phonics and Decoding

• What does it mean for instruction to be explicit, systematic, and recursive?

• What are some of the common phonics patterns beginning readers need to learn?

• What are the most common syllable types?

• What is the relationship between phonemic awareness and the development of decoding and encoding skills?

• What is the difference between phonics and phonological awareness?

• What role do decodable text, writing practice, and spelling practice play in reinforcing specific phonics skills?

III. Vocabulary and Fluency

A. Understands ways to build, expand, and use expressive and receptive vocabulary

B. Understands methods for teaching vocabulary systematically, explicitly, and repeatedly in multiple contexts

C. Knows how to match an instructional method to word complexity

D. Knows multiple approaches to teaching word solving, including the use of context clues and structural analysis

E. Knows how to guide students to understand a wide variety of words (common, contextual, content-specific) through direct instruction and independent vocabulary learning
Step 6: Review Study Topics

F. Understands instructional methods to foster students’ automaticity through accuracy, appropriate rate, and prosody

G. Knows methods of supporting fluent reading behaviors at the phoneme, word, and passage level

H. Knows how fluency, vocabulary, and comprehension are interrelated

Discussion areas: Vocabulary and Fluency
- What criteria should be used when selecting words for vocabulary instruction?
- How can teachers model the use of context as a strategy to confirm word meaning?
- How do common prefixes, suffixes, and roots affect the meaning of English words?
- What instructional strategies can be used to improve oral reading fluency?
- What is the relationship between fluency and comprehension?

IV. Comprehension of Literary and Informational Text

A. Understands how to support students’ listening comprehension and its relationship to reading comprehension

B. Knows how to support students’ speaking and listening skills as they discuss texts

C. Understands how to activate and build all students’ background knowledge to increase comprehension

D. Is familiar with methods for teaching comprehension systematically and explicitly to all learners

E. Knows how metacognition guides students’ development of monitoring their own comprehension and analysis of different types of text

F. Is familiar with strategies to guide students’ self-selection of appropriate texts to increase motivation and engagement

G. Knows how to differentiate instruction, tasks, and materials (print and digital) that are appropriate and culturally responsive to all learners

H. Understands how to teach the use of graphic and semantic organizers to support comprehension

I. Knows how to teach the genres (i.e., poetry, prose, drama), structures (i.e., story elements), and features of literary texts

J. Knows how to teach literary devices (i.e., figurative language, nuance of words, and alliteration)

K. Understands strategies for supporting readers as they construct literal and inferential meaning, including author’s use of language

L. Understands how to teach the types (i.e., biography, how-to), structures (i.e., description, cause and effect, sequence), and features of informational texts

M. Knows how to use technology to support students’ ability to critically examine online resources and foster digital literacy, to personalize learning experiences for students of different needs, and to support active learning across content areas

Discussion areas: Comprehension and Informational Text
- How can writing activities be used to support reading comprehension?
- In what ways do students’ cultural and linguistic backgrounds affect comprehension?
- What factors should be taken into account when choosing texts for students?
- What is the relationship between listening and reading comprehension?
- What is metacognition? Why is it important for strategic reading?
- Why does the explicit teaching of the structures and features of texts support comprehension?

V. Writing

A. Written Expression
1. Understands how to teach writing as a recursive process that supports self-evaluation and expression
2. Knows systematic, explicit methods to teach the steps of the writing process to all learners
3. Knows strategies for integrating reading and writing (i.e., summarizing, annotation)

4. Knows methods to use digital tools for communication, writing, collaboration, and publishing

5. Is familiar with the defining characteristics and appropriate instructional methods for teaching the various types of writing: informational/expository, argument/persuasive/opinion, and narrative

B. Spelling and Grammar

1. Knows methods to connect the teaching of both decoding and encoding as reciprocal skills

2. Knows how to take a systematic, explicit, multisensory, and recursive approach to spelling development

3. Understands methods for teaching the structure of written language, including the rules of grammar and mechanics

Discussion areas: Writing

• What does it mean that writing is a recursive process?

• What are the stages of spelling development? How can teachers help students move to the next stage?

• How does writing support reading development?

• What are the defining characteristics of, informational/expository, argument/persuasive/opinion, and narrative writing?

• What are some ways teachers can use technology and digital tools to support students at every stage of the writing process?

VI. Assessment and Instructional Decision Making (Constructed-Response Items)

A. Developing emergent literacy learners (phonological and phonemic awareness, phonics, and decoding/encoding)

B. Supporting independent literacy learners (fluency, vocabulary, comprehension, writing)

C. Responding to diverse learners (i.e., gifted, English learners, struggling readers and writers, and students with learning disabilities)

Discussion areas: Assessment and Instructional Decision Making

• How can teachers use assessment data to inform their instruction?

• What are some ways teachers can modify instruction for students with diverse learning profiles?
7. Review Smart Tips for Success

Follow test-taking tips developed by experts

Learn from the experts. Take advantage of the following answers to questions you may have and practical tips to help you navigate the Praxis test and make the best use of your time.

Should I guess?
Yes. Your score is based on the number of questions you answer correctly, with no penalty or subtraction for an incorrect answer. When you don’t know the answer to a question, try to eliminate any obviously wrong answers and then guess at the correct one. Try to pace yourself so that you have enough time to carefully consider every question.

Can I answer the questions in any order?
You can answer the questions in order or skip questions and come back to them later. If you skip a question, you can also mark it so that you can remember to return and answer it later. Remember that questions left unanswered are treated the same as questions answered incorrectly, so it is to your advantage to answer every question.

Are there trick questions on the test?
No. There are no hidden meanings or trick questions. All of the questions on the test ask about subject matter knowledge in a straightforward manner.

Are there answer patterns on the test?
No. You might have heard this myth: the answers on tests follow patterns. Another myth is that there will never be more than two questions in a row with the correct answer in the same position among the choices. Neither myth is true. Select the answer you think is correct based on your knowledge of the subject.

Can I write on the scratch paper I am given?
Yes. You can work out problems on the scratch paper, make notes to yourself, or write anything at all. Your scratch paper will be destroyed after you are finished with it, so use it in any way that is helpful to you. But make sure to select or enter your answers on the computer.

Smart Tips for Taking the Test

1. Skip the questions you find extremely difficult. Rather than trying to answer these on your first pass through the test, you may want to leave them blank and mark them so that you can return to them later. Pay attention to the time as you answer the rest of the questions on the test, and try to finish with 10 or 15 minutes remaining so that you can go back over the questions you left blank. Even if you don’t know the answer the second time you read the questions, see if you can narrow down the possible answers, and then guess. Your score is based on the number of right answers, so it is to your advantage to answer every question.
2. **Keep track of the time.** The on-screen clock will tell you how much time you have left. You will probably have plenty of time to answer all of the questions, but if you find yourself becoming bogged down, you might decide to move on and come back to any unanswered questions later.

3. **Read all of the possible answers before selecting one.** For questions that require you to select more than one answer, or to make another kind of selection, consider the most likely answers given what the question is asking. Then reread the question to be sure the answer(s) you have given really answer the question. Remember, a question that contains a phrase such as “Which of the following does NOT …” is asking for the one answer that is NOT a correct statement or conclusion.

4. **Check your answers.** If you have extra time left over at the end of the test, look over each question and make sure that you have answered it as you intended. Many test takers make careless mistakes that they could have corrected if they had checked their answers.

5. **Don’t worry about your score when you are taking the test.** No one is expected to answer all of the questions correctly. Your score on this test is not analogous to your score on the GRE® or other tests. It doesn't matter on the Praxis tests whether you score very high or barely pass. If you meet the minimum passing scores for your state and you meet the state’s other requirements for obtaining a teaching license, you will receive a license. In other words, what matters is meeting the minimum passing score. You can find passing scores for all states that use the Praxis tests at [https://www.ets.org/praxis/institutions/scores/passing/](https://www.ets.org/praxis/institutions/scores/passing/) or on the web site of the state for which you are seeking certification/licensure.

6. **Use your energy to take the test, not to get frustrated by it.** Getting frustrated only increases stress and decreases the likelihood that you will do your best. Highly qualified educators and test development professionals, all with backgrounds in teaching, worked diligently to make the test a fair and valid measure of your knowledge and skills. Your state painstakingly reviewed the test before adopting it as a licensure requirement. The best thing to do is concentrate on answering the questions.
8. Check on Testing Accommodations

*See if you qualify for accommodations to take the Praxis test*

**What if English is not my primary language?**

*Praxis* tests are given only in English. If your primary language is not English (PLNE), you may be eligible for extended testing time. For more details, visit [www.ets.org/praxis/register/plne_accommodations/](http://www.ets.org/praxis/register/plne_accommodations/).

**What if I have a disability or other health-related need?**

The following accommodations are available for *Praxis* test takers who meet the Americans with Disabilities Act (ADA) Amendments Act disability requirements:

- Extended testing time
- Additional rest breaks
- Separate testing room
- Writer/recorder of answers
- Test reader
- Sign language interpreter for spoken directions only
- Perkins Brailler
- Braille slate and stylus
- Printed copy of spoken directions
- Oral interpreter
- Audio test
- Braille test
- Large print test book
- Large print answer sheet
- Listening section omitted

For more information on these accommodations, visit [www.ets.org/praxis/register/disabilities](http://www.ets.org/praxis/register/disabilities).

**Note:** Test takers who have health-related needs requiring them to bring equipment, beverages, or snacks into the testing room or to take extra or extended breaks must request these accommodations by following the procedures described in the *Bulletin Supplement for Test Takers with Disabilities or Health-Related Needs* (PDF), which can be found at [https://www.ets.org/s/praxis/pdf/bulletin_supplement_test_takers_with_disabilities_health_needs.pdf](https://www.ets.org/s/praxis/pdf/bulletin_supplement_test_takers_with_disabilities_health_needs.pdf). You can find additional information on available resources for test takers with disabilities or health-related needs at [www.ets.org/disabilities](http://www.ets.org/disabilities).
9. Do Your Best on Test Day

Get ready for test day so you will be calm and confident

You followed your study plan. You prepared for the test. Now it’s time to prepare for test day.

Plan to end your review a day or two before the actual test date so you avoid cramming. Take a dry run to the test center so you’re sure of the route, traffic conditions, and parking. Most of all, you want to eliminate any unexpected factors that could distract you from your ultimate goal—passing the Praxis test!

On the day of the test, you should:

- be well rested
- wear comfortable clothes and dress in layers
- eat before you take the test
- bring an acceptable and valid photo identification with you
- bring an approved calculator only if one is specifically permitted for the test you are taking (see Calculator Use, at http://www.ets.org/praxis/test_day/policies/calculators)
- be prepared to stand in line to check in or to wait while other test takers check in

You can't control the testing situation, but you can control yourself. Stay calm. The supervisors are well trained and make every effort to provide uniform testing conditions, but don't let it bother you if the test doesn't start exactly on time. You will have the allotted amount of time once it does start.

You can think of preparing for this test as training for an athletic event. Once you've trained, prepared, and rested, give it everything you've got.

What items am I restricted from bringing into the test center?

You cannot bring into the test center personal items such as:

- handbags, knapsacks, or briefcases
- water bottles or canned or bottled beverages
- study materials, books, or notes
- pens, pencils, scrap paper, or calculators, unless specifically permitted for the test you are taking (see Calculator Use, at http://www.ets.org/praxis/test_day/policies/calculators)
- any electronic, photographic, recording, or listening devices

Personal items are not allowed in the testing room and will not be available to you during the test or during breaks. You may also be asked to empty your pockets. At some centers, you will be assigned a space to store your belongings, such as handbags and study materials. Some centers do not have secure storage space available, so please plan accordingly.

Test centers assume no responsibility for your personal items.
If you have health-related needs requiring you to bring equipment, beverages or snacks into the testing room or to take extra or extended breaks, you need to request accommodations in advance. Procedures for requesting accommodations are described in the Bulletin Supplement for Test Takers with Disabilities or Health-related Needs (PDF).

Note: All cell phones, smart phones (e.g., Android® devices, iPhones®, etc.), and other electronic, photographic, recording, or listening devices are strictly prohibited from the test center. If you are seen with such a device, you will be dismissed from the test, your test scores will be canceled, and you will forfeit your test fees. If you are seen using such a device, the device will be confiscated and inspected. For more information on what you can bring to the test center, visit www.ets.org/praxis/test_day/bring.

Are You Ready?
Complete this checklist to determine whether you are ready to take your test.

☐ Do you know the testing requirements for the license or certification you are seeking in the state(s) where you plan to teach?
☐ Have you followed all of the test registration procedures?
☐ Do you know the topics that will be covered in each test you plan to take?
☐ Have you reviewed any textbooks, class notes, and course readings that relate to the topics covered?
☐ Do you know how long the test will take and the number of questions it contains?
☐ Have you considered how you will pace your work?
☐ Are you familiar with the types of questions for your test?
☐ Are you familiar with the recommended test-taking strategies?
☐ Have you practiced by working through the practice questions in this study companion or in a study guide or practice test?
☐ If constructed-response questions are part of your test, do you understand the scoring criteria for these questions?
☐ If you are repeating a Praxis test, have you analyzed your previous score report to determine areas where additional study and test preparation could be useful?

If you answered "yes" to the questions above, your preparation has paid off. Now take the Praxis test, do your best, pass it—and begin your teaching career!
10. Understand Your Scores

Understand how tests are scored and how to interpret your test scores

Of course, passing the Praxis test is important to you so you need to understand what your scores mean and what your state requirements are.

What are the score requirements for my state?
States, institutions, and associations that require the tests set their own passing scores. Visit www.ets.org/praxis/states for the most up-to-date information.

If I move to another state, will my new state accept my scores?
The Praxis tests are part of a national testing program, meaning that they are required in many states for licensure. The advantage of a national program is that if you move to another state that also requires Praxis tests, you can transfer your scores. Each state has specific test requirements and passing scores, which you can find at www.ets.org/praxis/states.

How do I know whether I passed the test?
Your score report will include information on passing scores for the states you identified as recipients of your test results. If you test in a state with automatic score reporting, you will also receive passing score information for that state.

A list of states and their passing scores for each test are available online at www.ets.org/praxis/states.

What your Praxis scores mean
You received your score report. Now what does it mean? It’s important to interpret your score report correctly and to know what to do if you have questions about your scores.

To access Understanding Your Praxis Scores, a document that provides additional information on how to read your score report, visit www.ets.org/praxis/scores/understand.

Put your scores in perspective
Your score report indicates:
- Your score and whether you passed
- The range of possible scores
- The raw points available in each content category
- The range of the middle 50 percent of scores on the test

If you have taken the same Praxis test or other Praxis tests in the last 10 years, your score report also lists the highest score you earned on each test taken.
Content category scores and score interpretation

Questions on the Praxis tests are categorized by content. To help you in future study or in preparing to retake the test, your score report shows how many raw points you earned in each content category. Compare your “raw points earned” with the maximum points you could have earned (“raw points available”). The greater the difference, the greater the opportunity to improve your score by further study.

Score scale changes

ETS updates Praxis tests on a regular basis to ensure they accurately measure the knowledge and skills that are required for licensure. When tests are updated, the meaning of the score scale may change, so requirements may vary between the new and previous versions. All scores for previous, discontinued tests are valid and reportable for 10 years, provided that your state or licensing agency still accepts them.

These resources may also help you interpret your scores:

- Understanding Your Praxis Scores (PDF), found at www.ets.org/praxis/scores/understand
- Praxis Passing Scores, found at https://www.ets.org/praxis/institutions/scores/passing/
- State requirements, found at www.ets.org/praxis/states
Appendix: Other Questions You May Have

Here is some supplemental information that can give you a better understanding of the Praxis tests.

What do the Praxis tests measure?
The Praxis tests measure the specific knowledge and skills that beginning teachers need. The tests do not measure an individual’s disposition toward teaching or potential for success, nor do they measure your actual teaching ability. The assessments are designed to be comprehensive and inclusive but are limited to what can be covered in a finite number of questions and question types. Teaching requires many complex skills that are typically measured in other ways, including classroom observation, video recordings, and portfolios.

Ranging from Agriculture to World Languages, there are more than 80 Praxis tests, which contain selected-response questions or constructed-response questions, or a combination of both.

Who takes the tests and why?
Some colleges and universities use the Praxis Core Academic Skills for Educators tests (Reading, Writing, and Mathematics) to evaluate individuals for entry into teacher education programs. The assessments are generally taken early in your college career. Many states also require Core Academic Skills test scores as part of their teacher licensing process.

Individuals entering the teaching profession take the Praxis content and pedagogy tests as part of the teacher licensing and certification process required by many states. In addition, some professional associations and organizations require the Praxis Subject Assessments for professional licensing.

Do all states require these tests?
The Praxis tests are currently required for teacher licensure in approximately 40 states and United States territories. These tests are also used by several professional licensing agencies and by several hundred colleges and universities. Teacher candidates can test in one state and submit their scores in any other state that requires Praxis testing for licensure. You can find details at www.ets.org/praxis/states.

What is licensure/certification?
Licensure in any area—medicine, law, architecture, accounting, cosmetology—is an assurance to the public that the person holding the license possesses sufficient knowledge and skills to perform important occupational activities safely and effectively. In the case of teacher licensing, a license tells the public that the individual has met predefined competency standards for beginning teaching practice.

Because a license makes such a serious claim about its holder, licensure tests are usually quite demanding. In some fields, licensure tests have more than one part and last for more than one day. Candidates for licensure in all fields plan intensive study as part of their professional preparation. Some join study groups, others study alone. But preparing to take a licensure test is, in all cases, a professional activity. Because a licensure exam surveys a broad body of knowledge, preparing for a licensure exam takes planning, discipline, and sustained effort.

Why does my state require the Praxis tests?
Your state chose the Praxis tests because they assess the breadth and depth of content—called the “domain”—that your state wants its teachers to possess before they begin to teach. The level of content knowledge, reflected in the passing score, is based on recommendations of panels of teachers and teacher educators in
Appendix: Other Questions You May Have

each subject area. The state licensing agency and, in some states, the state legislature ratify the passing scores that have been recommended by panels of teachers.

**How were the tests developed?**

ETS consulted with practicing teachers and teacher educators around the country during every step of the Praxis test development process. First, ETS asked them what knowledge and skills a beginning teacher needs to be effective. Their responses were then ranked in order of importance and reviewed by hundreds of teachers.

After the results were analyzed and consensus was reached, guidelines, or specifications, for the selected-response and constructed-response tests were developed by teachers and teacher educators. Following these guidelines, teachers and professional test developers created test questions that met content requirements and ETS Standards for Quality and Fairness.*

When your state adopted the research-based Praxis tests, local panels of teachers and teacher educators evaluated each question for its relevance to beginning teachers in your state. During this “validity study,” the panel also provided a passing-score recommendation based on how many of the test questions a beginning teacher in your state would be able to answer correctly. Your state's licensing agency determined the final passing-score requirement.

ETS follows well-established industry procedures and standards designed to ensure that the tests measure what they are intended to measure. When you pass the Praxis tests your state requires, you are proving that you have the knowledge and skills you need to begin your teaching career.

**How are the tests updated to ensure the content remains current?**

Praxis tests are reviewed regularly. During the first phase of review, ETS conducts an analysis of relevant state and association standards and of the current test content. State licensure titles and the results of relevant job analyses are also considered. Revised test questions are then produced following the standard test development methodology. National advisory committees may also be convened to review and revise existing test specifications and to evaluate test forms for alignment with the specifications.

**How long will it take to receive my scores?**

Scores for tests that do not include constructed-response questions are available on screen immediately after the test. Scores for tests that contain constructed-response questions or essays aren't available immediately after the test because of the scoring process involved. Official score reports are available to you and your designated score recipients approximately two to three weeks after the test date for tests delivered continuously, or two to three weeks after the testing window closes for other tests. See the test dates and deadlines calendar at [www.ets.org/praxis/register/dates_centers](http://www.ets.org/praxis/register/dates_centers) for exact score reporting dates.

**Can I access my scores on the web?**

All test takers can access their test scores via My Praxis Account free of charge for one year from the posting date. This online access replaces the mailing of a paper score report.

The process is easy—simply log into My Praxis Account at [www.ets.org/praxis](http://www.ets.org/praxis) and click on your score report. If you do not already have a Praxis account, you must create one to view your scores.

**Note:** You must create a Praxis account to access your scores, even if you registered by mail or phone.

Your teaching career is worth preparing for, so start today! Let the Praxis Study Companion guide you.
