Since its founding in 1947, ETS has conducted and disseminated scientific research to support its products and services and to advance the measurement and education fields.

In keeping with these goals, ETS is committed to making its research freely available to the professional community and to the general public.

This is a list of 2016 ETS research publications – those that ETS published as well as those that appeared in independent journals and books. In most cases, ETS staff members or affiliates were the lead authors of the independent publications listed. Publication titles link to abstracts, citation records, or full text where available. The full text for most ETS-published works may be accessed online at http://search.ets.org/researcher.

Published accounts of ETS research, including papers in the ETS Research Report series, undergo a formal peer-review process by ETS staff to ensure that they meet established scientific and professional standards.

All such ETS-conducted peer reviews are in addition to any reviews that outside organizations may provide as part of their own publication processes.

Due to production deadlines, a small number of 2016 research publications may not be listed in this document.
